LETTER OF TRANSMITTAL

Department of Public Instruction.

Tallahassee, Florida, January 1, 1931.

To His Excellency,
Doyle E. Carlton,
Governor of Florida.

Sir:

In compliance with Section 27, Article IV, of the Constitution of Florida, I have the honor to submit herewith the Biennial Report of the Department of Public Instruction for the two years beginning July 1, 1928, and ending June 30, 1930.

Yours respectfully,

W. S. CAWTHON,
State Superintendent of Public Instruction.

PARTS OF THE PRESENT CODE THAT SHOULD BE REPEALED

Note: References by sections are to the Compiled General Laws of Florida, 1927.

Sections 494-495 refer to the course of study prepared under the direction of the State Department of Public Instruction in 1918. Since that course is now obsolete there is no need of the statute.

Section 526 makes provision for the compensation of members of county school boards for their services. If this provision is not ample, the section should be amended so that school board members may be paid adequately. The multiplicity of provisions for the payment of members of school boards, found in Sections 527-550, has little to commend it either from the standpoint of common sense or from that of educational administration. These provisions tend to commercialize the position of member of the school board.

Section 551 provides for the payment of the salaries of County Superintendents of Public Instruction on the basis of receipts of school funds setting up minima for said salaries, but no maxima. It is within the discretion of county school boards to pay salaries in excess of the minimum amounts fixed by the law when they think that the superintendents of their respective counties merit these larger salaries; hence, it would not appear to be necessary to resort to such legislation as that found in sections 552-558.

Section 562 was enacted in order to enable the trustees of a certain special tax district of the State to set aside the authority of the county school board with respect to the employment of teachers. If, in general it is right and proper for trustees to be allowed to act in only an advisory capacity in the employment of teachers, there seems to be no good reason why the trustees of the district in question should be granted more than advisory authority.

Paragraph 10 of Section 581 is supplanted by Section 648, and, is therefore, unnecessary. Paragraph 11 of

Section 581 is obsolete; it places an unnecessary burden on the county superintendent and should be repealed. There are only a few superintendents that pay any attention to this statute.

Sections 582-583 should be replaced by a statute requiring the report of the county superintendent to be filed in the office of the State Superintendent not later than September 1st of the fiscal year following that covered by the report. Penalty for failure to comply with this requirement should be the forfeiture of the apportionment of funds due the county between September 1st and the date of the receipt of the report in acceptable form by the State Superintendent.

The penalty prescribed by the existing statute is ineffective. State apportionments are increasing in magnitude yearly and there is too much at stake for a few superintendents to be allowed to send in their reports at their convenience, and thus jeopardize the interests of the children of the entire state.

Sections 664-668 relate to the certification of teachers and should be repealed, since Sections 630-663 make ample provision for the issuance of certificates on credentials to teachers residing in other states and desiring to work in Florida. As a matter of fact the time seems to be at hand when we should cast about to find ways and means whereby we may be able to utilize the services of more Florida teachers than we now employ.

Sections 680-681 relate to the preparation of a course of study in 1903 and is no longer applicable to conditions of the present day.

Sections 682-683 provide for rural school inspectors and should be repealed. The supervisory needs of rural and urban elementary schools alike should be met by one State Supervisor working in cooperation with county supervisors.

In view of the comparatively recent decision of the State Supreme Court relative to the status of the position of county school attendance officer, Sections 684-699 should receive the attention of the Legislature.

Sections 769-774 relating to scholarships in higher institutions should be repealed and a loan fund should be created by statute and administered by faculty committees of the several institutions. The privilege of renewing scholarships should be extended to those now holding them.

Under such a plan the state could aid those and only those found to be worthy and in actual need of financial help.

Section 809 should be repealed since Section 807 makes ample provision for the administration of the summer schools conducted at the institutions of higher learning.

Section 812 should be repealed for the State Superintendent of Public Instruction has nothing directly to do with requisitions for the cost of summer schools as administered under Section 807.

THE COUNTY SCHOOL ORGANIZATION

Our Constitution provides for a double-headed system, the County School Board and the County Superintendent each being independent of the other.

Section 6 of Article VIII of the Constitution should be amended so as to remove the county superintendency from the list of county offices enumerated in that section, and to place it under legislative control. The experiences of the boards and superintendents in several counties of Florida during the last year or two should be sufficient evidence that our dual system is defective.

The school board should consist of five members selected from the county at large, and should have the authority to employ the county superintendent.

THE CERTIFICATION OF TEACHERS

The total numbers of teachers' certificates of the various types issued during the biennium are as follows:

Third Grade, 2,077; Second Grade, 1,763; First Grade, 517; Special, 459; Primary, 199; Professional, 13; Graduate State, 2,168.

Two thousand five hundred thirty-nine applicants for Graduate State certificates were successful in the examination on the Constitution of the United States.

The number of applicants for certificates of the examination type was twelve hundred seventy-two less last year than it was for the year before. Let us hope that the numbers will continue to decrease until a statute abolishing these examinations will be in order.

The present trend in the State is toward smaller numbers of certificates of low grade and larger numbers of

Graduate State certificates. Of the five hundred thirty-nine certificates of the examination type issued as a result of the examinations last September, one hundred thirty-three were issued to persons who, according to their own statements, had not completed the equivalent of a high school course.

Our certificate law should be simplified. At present our certification scheme is a dual affair, with certificates by examination still claiming too much of the time and energy of the state superintendent's office force.

As an example of the waste involved in our present examination system, consider the professional certificate. In the past seven years, only fifty-five professional certificates have been issued. Yet in that time examination questions for this certificate have been prepared, printed and distributed to the counties for twenty-two separate examinations.

There should be fewer kinds of examination certificates. Two types, one a special high-school certificate in a given subject and the other a special elementary certificate would be based on examinations on a few fundamental subjects. These certificates could be used and renewed several times while their holders were attending summer schools and working toward meeting the requirements for graduate state certificates.

We have in all less than 12,000 teaching positions in the State. In the past seven years we have issued, in round numbers, 10,000 graduate state certificates in addition to examination certificates. It would seem then that we are not far from the time when some definite training can be required of a teacher coming into the Florida school system. However, we must not fail to recognize the worth of the good and tried teacher who holds an examination certificate. The certificate clerk tells me that more than twenty-five teachers, who have taught in this State for a number of years have during the past year graduated from two or four-year college courses and have been issued graduate state certificates. All honor to them! They have fought the good fight, and may their tribe increase. Such teachers with their loyalty to the State, their fine experience, and their forward-looking attitude should be able to render the very best service to the schools of Florida.

In connection with graduate state certificates, it might be well for us to recognize the quality of work which an applicant has done in college. For example, some special designation as Superior or A Class might be given to certificates granted those persons graduating in the upper fourth of a given class of a standard college.

Finally, let me say that our certificate system, with all of its shortcomings, is in step with the modern trend in the following particulars:

1. It is a State system—Certificates are issued by only one authority.
2. Specialization is required for teaching high-school subjects. There is in this State no so-called "blanket certificate" valid for teaching all subjects in all grades.

SCHOOL FINANCES

According to statistics compiled for 1928 by the National Education Association, Florida ranks high in the list of states in the expenditures for education in several particulars.

Of every one hundred dollars of our State income, we invested \$5.76 for education; the percentage of income spent for this purpose being higher than it was in any other state of the Union. The average expenditure in the nation was \$2.74 for each one hundred dollars of income.

Of every one hundred dollars of wealth in the United States, \$1.79 was invested in school property. In this respect Florida again ranks first with \$2.89 invested in school property, of every \$100 of wealth.

The annual investment by the nation in tobacco, soft drinks, theaters, movies and similar amusements, jewelry, perfumes and cosmetics, sporting goods, toys, et cetera, was \$6,401,650,000. The cost of public education in the United States was approximately two and one-half billions or 38.25% of the amount spent for the so-called luxuries enumerated. As compared with these luxuries Florida places a greater value on education than does any other state. The amount spent by us for education was 73.71% of the amount for articles clearly in the luxury class. In this third item our state again heads the list.

Florida has no reason to be ashamed of its status with respect to expenditures for life insurance, passenger

automobiles and building construction as related to those for education in tax supported schools. In the ratios of costs of public education to those of life insurance we ranked fourteenth; in those of expenditures for passenger automobiles to expenditures for schools we were number twenty-two from the top and we spent \$46.36 for schools for every one hundred dollars that we invested in building construction; thus placing ourselves in the twenty-sixth place, a little below the median, in the list of forty-eight states in this item.

Certain data will now be presented that should be a matter of grave concern both to educators and to the citizens of the State at large.

Outstanding obligations represented by time warrants and notes against the counties and districts at the close of the last fiscal year amounted to more than seven million four hundred thousand dollars; and the aggregate bonded indebtedness of these units for schools exceeded fifty-seven and one-half millions. The total amount of cash in sinking funds was approximately two and three-quarter millions.

If we had something to show for these enormous debts in the form of adequate salaries for the rank and file of our teaching staff, our attitude might be more cheerful; but unfortunately such is not the case. Fair salaries are paid to only about half of our teaching positions. During last year, each of four hundred ninety-four teachers received less than two hundred dollars; each of nine hundred eighty-seven teachers, less than three hundred dollars; each of fifteen hundred forty-two teachers less than four hundred dollars; each of two thousand four hundred twenty teachers less than five hundred dollars; each of four thousand four hundred fifty-nine teachers less than seven hundred fifty dollars; and each of six thousand eight hundred ten teachers less than one thousand dollars. The number of workers in the last group mentioned is considerably more than half of the total number; hence, the median annual salary lies below one thousand dollars; it is above seven hundred fifty dollars.

The State, through its legislature should see to it that this latter amount is made the minimum salary for an elementary teacher. Since we spent last year for instruction \$10,069,190.25, and since this sum is approximately three-fourths of the \$13,419,350.76 used for current

expenses, a state fund should be raised adequate for a minimum allowance of approximately one thousand dollars per elementary class-room at least three-fourths of this amount being allotted to the salary of the teacher. The costs of the various types of class rooms in each county should be expressed in terms of that of the white elementary class room agreed upon, a uniform basis for the State as a whole being used.

Figures tabulated by R. M. Evans in the office of the State Superintendent show a close estimate of the number of weighted instruction units for the State at present to be 10,557.93. To finance the minimum program proposed a fund of \$10,327,661 would be needed. This fund could come entirely from the State or it could come from the State and counties jointly. These two plans of financing the minimum State program are known respectively as the "large fund" plan and the "small fund" plan. The main features of the former plan are: (1) A relatively large fund from State sources; (2) apportionment to the counties from the State fund without regard to their relative taxable abilities to maintain equivalent programs, and (3) freedom on the part of the counties and districts to employ all of their available resources for the expansions of their respective programs beyond the minimum maintained by the State.

The characteristics of the "small fund" plan are: (1) Substantial contributions by the various counties to the minimum program; and as a consequence, less freedom on their part in the expansion of their respective programs. (2) The determination of the number of mills necessary to be levied on the property of the wealthiest county to finance the minimum program in that county without aid from the State and the requirement of this same levy, in number of mills, of every county. (3) The apportionment to each county from the State fund the difference between the proceeds of the levy in that county, and the amount required to finance the minimum program in that county.

Two objections to the small fund plan have been raised. It has been maintained that it is impossible to equalize educational opportunities as between counties without the equalization of assessments of taxes on property and that we do not have uniform assessments in Florida—that every county has its own basis of assessment.

Admitting the validity of this objection, the *distribu-*

tion of a State fund by a method which takes into account the assessed valuations determined by the various county officials is neither more nor less inequitable than is the collection of taxes in the several counties for the maintenance of the State government, under the system now in vogue. The fourteen and one-fourth mills levied in 1930 for schools, pension fund, general revenue, etc., is collected in each county on the assessed valuation fixed for that county. It is generally conceded that assessments on property in one county differ from those on property manifestly of the same value in another county.

Under the same system we have collected and distributed a one-mill tax for schools since provision was made for the same in the Constitution of 1868.

The allotment of the proceeds of a six-mill levy in each county for the county's part of the maintenance of a minimum program and the apportionment to the county from a State fund, of a sum sufficient to complete the program would mean that some counties would receive more from the State fund than the respective amounts to which they were entitled because of their low assessments of property and of the resulting small yields from the six-mill levy.

It is now a matter of common remark that assessments are lowered in the various counties to the end that these counties may not pay more than their respective shares into the state treasury.

If we are to continue to *collect* money under such conditions until we shall have developed a better taxation system, why can we not afford to *pay it out* under the same conditions? Our distribution of state funds would be improved (not made perfect) by the proposed change.

The second objection to the small fund plan is that no county could collect all of taxes required of it and that, consequently, the minimum program would collapse because of the failure of the county to do its part. Any other function of government that depends upon the proceeds of the property tax is open to the same objection.

Under the large fund plan the maintenance of a minimum program would be more certain, for there would probably be less dependence upon the property tax.

The fund proposed for the minimum program should be used for operating expenses only.

It is suggested that if the small fund plan is adopted each county be required to contribute the proceeds of a six-mill levy in order to share in the State fund. Such a levy on the assessed valuation of the property of the State for the year 1930 should yield \$3,459,816.09. Since the State distributed \$4,022,918.63 to the counties for the fiscal year ending June 30, 1930, it would be necessary for the State to increase its fund by \$2,844,926.82 for next year in order to carry out the program.

Table 11 in this Chapter is designed to show the distribution of \$10,327,661, according to the small fund plan and is self-explanatory.

If the State should finance the minimum program entirely, the amount that should be allotted to each county from the State fund is shown in the fourth column.

CLASSROOM OR INSTRUCTION UNITS

The instruction unit is based upon average daily attendance, but is a better basis of distribution than average daily attendance alone for the following reasons:

1. It takes into consideration differences in cost of high school and elementary school instruction—also junior and senior high school instruction.
2. It takes into consideration differences in cost of instruction of white children and negro children.
3. It takes into consideration the cost of transportation of children.
4. The calculation of instruction units is based upon a scientific study of actual costs of instruction and transportation in schools of varying sizes and locations with a distinct effort to be fair to all.

CALCULATION OF INSTRUCTION UNITS

The white elementary school teaching unit is taken as the basis of distribution of funds and the other units are calculated (or weighted) from this base. All such calculations are based upon actual Florida costs* and the formulas used were derived from studies of costs in widely distributed counties of the State, but counties representative of average costs for the State.

The Elementary Unit. (Grades 1-6 or 1-8.)

- (a) In a one-teacher elementary school one unit is counted for an average daily attendance of 30 or less pupils. For an

*An exception must be noted in the case of junior high school units, in which case an average between elementary and senior high school costs was used.

average daily attendance of more than 30 pupils one unit is counted for the first 30 pupils and the fractional part of one unit for the number above 30 in average daily attendance.

- (b) In a two-or-more-teacher elementary school with an average daily attendance of less than 289 two units are counted for the first 40 pupils in average daily attendance and one unit for each additional 34 pupils.
- (c) In an elementary school with an average daily attendance of 289 or above one elementary unit is counted for each 30 pupils in average daily attendance.

The Junior High School Unit. (Grades 7-8 or 7-9.)

- (a) For the first 30 pupils in average daily attendance count 2 units, and for the number of pupils above 30 and less than 264 in average daily attendance count one unit for each 32 pupils.
- (b) For schools in which 264 or more pupils are in average daily attendance count one unit for each 27 pupils.

The Senior High School Unit. (Grades 9-12 or 10-12.)

- (a) For the first 35 pupils in average daily attendance (in schools having in average daily attendance less than 250 pupils) count three units; and for each additional 29 pupils in average daily attendance count one unit.
- (b) For schools having in average daily attendance 250 or more pupils count one unit for each 24 pupils.

WEIGHTED UNITS

As already stated, the white elementary unit is taken as the basis of instruction costs. To reduce all other units to the denomination of white elementary units:

- (a) Multiply white junior high school units by 1.22.
- (b) Multiply white senior high school units by 1.43.
- (c) Multiply negro elementary units by .54.
- (d) Multiply negro junior high school units by .69.
- (e) Multiply negro senior high school units by .84.
- (f) Count each \$1,500 spent for transportation as one unit.

The instruction units for every school in every county of the State were computed upon the basis of average daily attendance as given in the annual reports of County Superintendents for the year 1929-30, and the totals for transportation, white schools, and negro schools, as well as a combination of these into a grand total for each county are shown in Table 1 which follows:

TABLE I.
INSTRUCTION UNITS 1929-1930

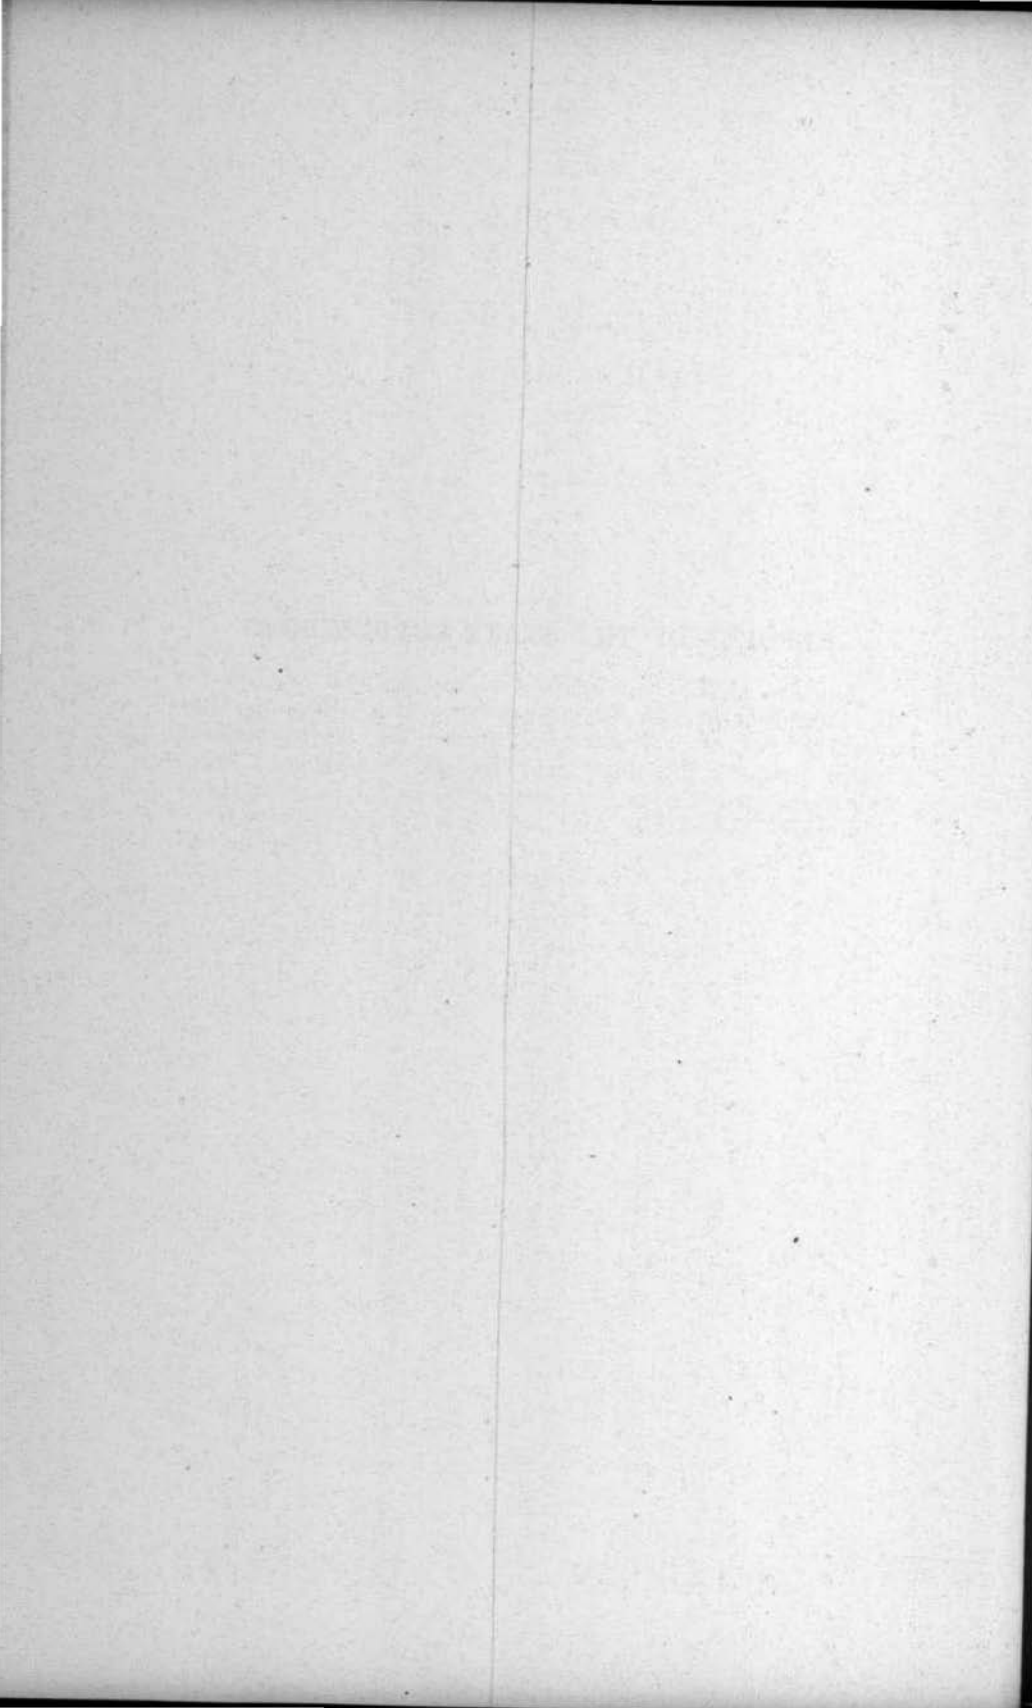

COUNTIES	Transportation	White	Negro	Total

I. INTRODUCTION

An attempt has been made in the present report to simplify the rather cumbersome tables of General Statistics usually included in the report of the State Supervisor of High Schools. The present plan has been to group the data for a particular class of schools into one table; for example, Four-Year Senior High Schools are all grouped together in one table and Six-Year Junior-Senior High Schools in another, etc. By doing this the tables have been reduced in width from 29 columns to 17 columns and more information is included than formerly. The old tables could not, due to their great width, be printed on a single page, and they also contained many blank spaces, while the present tables are narrow enough to come within the width of a single page and most of the blank space has been eliminated. It is believed that they will prove more satisfactory for reference.

II. SUMMARY OF ACTIVITIES FOR THE BIENNIUM 1928-30

From the Monthly Reports of the State Supervisor of High Schools to the State Superintendent of Public Instruction, it is shown that during the biennium 1928-30 he spent 313½ days in the field and 279½ days in the office.

This work in the field has been devoted primarily to such activities as inspections of high schools, attending educational meetings and conferences, and speaking before such groups as teachers' meetings, commencement audiences, women's clubs, parent-teacher associations, and luncheon clubs. In the performance of these duties he has made 227 inspections of high schools, made 70 speeches, mostly of a professional nature, and attended 61 educational gatherings of various kinds within the State, and four outside the State. Two of the latter were the annual meetings of the Association of Colleges and Secondary Schools of the Southern States and two were meetings of the National Education Association. He has the privilege of serving the Southern Association on three committees: the Central Reviewing Committee, which examines applications for accreditation from the high schools of the eleven Southern States; the Standing Committee on Standards, whose function is to study all proposed changes in standards for accreditation and make

recommendations to the Secondary Commission of the Association; and the Committee on Junior High Schools, which has been studying the question of junior high schools for a number of years.

The summer of 1929 the Supervisor spent at the University of Florida where he taught two classes, one in High School Administration and one in High School Curriculum. He has conducted two annual state conferences of high school principals and compiled a year-book of one of these conferences. He has assisted the Supervisor of Elementary Schools in making a testing survey of Glades county, a report of which was printed by the State Department of Public Instruction.

The time in the office was devoted largely to checking applications for accreditation of some 276 high schools that apply annually, and the correspondence necessarily connected with this and other of the Supervisor's duties. Numerous questionnaires must be answered, and information furnished to many school people who call. In addition to this routine, bulletins of Manual Arts and Modern Languages have been edited and printed; a questionnaire study of high school parent-teachers associations in the State was made and a report presented at the annual meeting of the State P. T. A. Congress; a questionnaire study of accreditation practices for summer high schools was made and reported to the State Supervisors of High Schools meeting of the Southern States at Fort Worth, Texas; as Chairman of the Aims Committee he directed the preparation of the Aims Report for the Steering Committee in connection with curriculum revision in Florida; and he has gotten out the two directories of accredited schools.

III. SOME COMPARATIVE STATISTICS

The tables included in this part of the report are somewhat cumulative and have been brought forward from the report of two years ago with some modifications and the data for the present biennium added to show trends and growth. As was said in that report, each table is a separate study and, due to the fact that all data for a given period of years were not available, no effort is made to have each table cover the same periods of years as every other.

A. Growth of Standard High Schools in Florida.

Table I gives for each school year from 1908-09 (the first year that Florida had a high school inspector, and began to publish a list of standard or accredited high schools), to 1929-30 the number of high schools accredited by the State Board of Education, the number of high school teachers employed, the enrollment in grades 9-12 in these schools (which was the total enrolment in accredited high schools until the junior high school movement began in the State), the enrolment in the twelfth

* Four-year high schools only.

** The large increase in enrolment between 1927-28 and the two years that follow is due to the addition of those pupils in grades 10-12 in Three-Year Senior High Schools and in grades 9 and 10 in Junior High Schools, which were not included in 1927-28. There were 11,830 of these in 1928-29 and 12,140 in 1929-30.

grades in these schools, and the last two items as reported by the county superintendents.

The figures in this table show a very rapid development of the high school in Florida. Especially does it indicate an increased interest in accrediting high schools. In 1919-20 it can be safely assumed that practically all students in accredited high schools were in grades 9-12 of those schools as there was little reorganization in the high schools at that time, while the figures given by the county superintendents in grades 9-12 include all pupils in both accredited and non-accredited schools. From these two sets of figures it can be determined that 55.3 per cent of all students enrolled in grades 9-12 in 1919-20 were in accredited high schools. Using the same method for 1928-29,¹ it is seen that 82.5 per cent are enrolled in accredited high schools.

The increase in actual number of accredited schools from 1919-20 to 1929-30 has been 261 per cent. The increase in enrolment in grades 9-12 over the same period has been 451 per cent. The increase in the number of teachers employed has been 779 per cent. This is really not a comparable figure, however, since the number for 1929-30 included teachers in grades 7 and 8 in junior high schools. There was no way to separate these from those teaching in grades 9-12 as most of them teach in both divisions. There has been a steady increase in the ratio of pupils in grade 12 to those in grades 9-12. In 1919-20 it was 1 to 7, or approximately 14.5 per cent of all pupils in grades 9-12 were enrolled in the 12th grade. In 1929-30 this ratio increased to approximately 1 to 6, or about 16.4 per cent of all pupils in grades 9-12 are enrolled in grade 12. This is a good showing in holding power when the enormous increase in enrolment of 451 per cent is considered, and also the fact that many of the students in grades 9-10 in 1929-30 are in separate junior high schools many of which are in isolated rural districts and small towns with no senior high schools. The per cent of increase of pupils enrolled in grade 12 is greater than the per cent of increase in enrolment. The former is 566.4 per cent while the latter is 451 per cent. This indicates considerable increase in the holding power of the high schools, because it may be safely assumed that with such a large increase in enrolment that there is less selec-

¹ Figures for 1929-30 not available from County Superintendents' Reports.

tion of those that enter high school and consequently a larger proportion of failures would be expected. It may be that teachers are less strict in grading than formerly or it may be that the high school curricula are more nearly adjusted to the needs of the pupil. Both may be true. A number of other reasons may be suggested as an explanation of this increased holding power.

B. Development of the Reorganized High School in Florida.

The reorganization movement in Florida high schools has been rather rapid since the legislature of 1925 legalized the junior high school. In September, 1926, the State Board of Education passed regulations for accrediting six types of these reorganized schools. Table II shows the number and enrolment of each type by years from 1926-27 through 1929-30, a four-year period. It also shows the total number of high schools reporting, the total enrolment in all types of schools, the total number of reorganized high schools and their enrolment, the total number and enrolment of the old type, 8-4 and 8-2, high schools, and the per cent that the number of reorganized schools is of the total and the per cent of the total high school enrolment that is enrolled in the reorganized high schools.

The table indicates a steady development of the reorganized high school. In 1926-27, 78 or 38.6% of the high schools reporting had some variation of the 6-3-3 organization. These schools contained 65.9 per cent of the total high school enrolment. Four years later, 1929-30, 170, or 61.2 per cent of all high schools reporting were reorganized, and their enrolment was 74.4 per cent of the total high school enrolment. Most of this increase came in three years, however, as there was very little change in the per cents between 1928-29 and 1929-30.

The Six-Year Junior-Senior High School seems to be the most popular and suitable type of reorganized high school for communities up to about 15,000 population. Only in the larger centers do we find a separate organization for the junior and senior high schools. There are only nine such systems in the State while there are 84 communities with the Six-Year High School.

TABLE II.

DISTRIBUTION OF HIGH SCHOOLS, ACCREDITED, AND NON-ACCREDITED, ACCORDING TO TYPE, WITH ENROLMENT IN EACH TYPE, FOR THE SCHOOL YEARS 1926-27 THROUGH 1929-30.

C. What Becomes of Florida High School Graduates.

In Tables III and IV an attempt is made to show by numbers and percentages what becomes of Florida high school graduates. The tables are cumulative, giving figures for alternate years from 1922-23 to 1928-29, a six-year period. The data are taken from the accreditation reports of the high school principals to the State Department of Public Instruction, which are sent to the office of the State Superintendent in October and November of each year.

During the six-year period there has been an increase in the number of high school graduates from 2,049 in June of 1923 to 4,480 in June of 1929, an increase of 118 per cent. In this time the per cent that graduates are of the whole high school population has dropped from 17.4 to 12.6. This is really an apparent drop, however, that can without doubt be offset by the fact that in 1923 practically all the schools considered were of the 8-4 type with grades of 9-12 only, while by 1929 only 14,402 of the high school enrolment of 55,521 were enrolled in 8-4 organizations, all other types included grades 7-12. (See Table II.)

The number of graduates going to college is seen from Table III to be steadily increasing. This increase is from 1,011 in 1923 to 1,835 in 1929. The per cent of the total of high school graduates going to college is seen to be steadily decreasing, the decrease being from 49.3 per cent in 1923 to 40.9 per cent in 1929. Although more girls than boys graduate from college, a larger per cent of the male graduates enter college than is the case with the opposite sex. In view of the fact that about 60 per cent of our high school graduates do not enter college, at least the year following graduation, and according to figures of the Office of Education, only about one-third of those that enter ever get degrees, it would seem that the college preparatory function of our high schools is becoming relatively less important than formerly.

Another interesting observation that may be made from Table III is the fact that the per cent of high school graduates enrolling in our State Institutions at Gainesville and Tallahassee is steadily decreasing, especially so at the University of Florida. The Florida State College for Women decreased in per cent to 1927-28 when it had dropped as low as 23.2 (a figure not shown in the table),

but had a decided increase in 1928-29. On the other hand, those going to colleges not listed in this table are decidedly on the increase, to 1926-27, at least. This means that increasingly larger percentages are going to colleges out of the State, as Florida colleges not listed draw a negligible number.

Table IV shows what becomes of those not going to college. The per cent of graduates reported as employed is decreasing while the number reported as unemployed and lost is increasing. It is to be regretted that we cannot have some better follow-up of our graduates who do not go to college. It seems deplorable that more than one-fourth of them are lost sight of by the principals by October and November—within six months of graduation. Practically all the lost ones are from the group that will not go to college. How does the high school training they have received function in their lives? This would be valuable information for the high school curriculum builder.

TABLE III.

GRADUATES ENROLLED IN HIGHER INSTITUTIONS BY SEXES FOR 1928-29, AND COMBINED FOR 1922-23, 1924-25 AND 1926-27.

IV. TRAINING OF HIGH SCHOOL TEACHERS AND PRINCIPALS IN FLORIDA

TABLE V.

TRAINING OF FLORIDA HIGH SCHOOL TEACHERS AND PRINCIPALS FOR 1929-30.

(Including White and Negro Schools, Public and Private, Accredited and Non-accredited.)

Amount of Training	No. of H. S. Teachers	Per Cent of Teachers in Each Class	No. of H. S. Principals	Per Cent of Principals in Each Class
Less than High School Graduation	15	.6	5	1.8
4 Years' High School and less than 1 Year's College	108	4.2	7	2.5
1 Year's College and less than 2 Years	82	3.2	11	4.0
2 Years' College and less than 3 Years	369	14.3	17	6.1
3 Years' College and less than 4 Years	128	5.0	9	3.2
4 Years' College and less than 5 Years	1,636	63.4	161	58.1
5 Years' College and less than 6 Years	179	6.9	47	17.0
6 Years' College and less than 7 Years	46	1.8	13	4.7
7 Years' College or more....	19	.7	7	2.5
Totals	2,582	100.1	277	99.9

The total number of teachers in the above table varies slightly from the totals given in Table I and from those given in the tables of General Statistics, due to the fact that only accredited schools were included in Table I and a few teachers had to be thrown out of the tabulations for the above table due to evident inaccuracies in the data concerning their training.

Some interesting facts relative to the training of Florida high school teachers and principals are revealed by the above table. Both the number and per cent of teachers and principals, separately, with a given amount of training are shown. It can be readily seen that 72.8% of the teachers in all types of high schools (junior and

senior) have training of four years college and above, while 92.1 per cent have training of two years college and above. This shows that practice runs far ahead of legal requirements, for there are still three certificates not based on training that legally permit their holders to teach in junior high schools and two of these will legally permit the teaching of certain subjects in the senior high schools. This table would indicate that there are relatively few of these people teaching in the high schools of Florida. Only .6 of one per cent of Florida high school teachers have training below high school graduation and practically all of these are teaching in rural B-Junior High Schools. Only 4.8 per cent have training less than one year of college. It would seem therefore that there is no valid reason for not repealing the law providing for certificates in high schools at least, not based on training, provided that such a law is not made retroactive.

One of the most striking things revealed in tabulating the data for the training of Florida high school principals is the wide range in training. One claimed no training above the elementary school while one had had eight years of college work. Of the 277 principals included in this study 228, or 82.3 per cent, have four years college and above. The other 22, or 8.3 per cent of the total, are very largely in the rural B-Junior High Schools. It is thus seen that on the whole principals do not have an average amount of training appreciably greater than their teachers. Some type of certificate should be worked out for principals that would on the average raise the level of training for the people who fill these positions and make it impossible for those with as little training as the lower 8 per cent of this group to fill positions as principals of high schools of any type.

V. ACCREDITATION OF NEGRO HIGH SCHOOLS

Increased interest is being shown by negroes in high school accreditation. This is indicated by the fact that more negro schools are applying for accreditation and more are meeting standards yearly. In 1924-25 the first negro high school was listed as standard. In 1925-26 two were listed; in 1926-27 two; in 1927-28, seven; in 1928-29, nine; and in 1929-30, sixteen were listed out of twenty-two applicants. The Supervisor of High Schools is making a definite effort to encourage the efforts of

negro schools to meet requirements for accreditation and it is hoped that the next biennium will add an appreciable number to the list. An assistant to the Supervisor of High Schools who could devote a definite part of his time to negro high schools would do much to improve this situation. Lack of experience in meeting requirements for accreditation on the part of negro principals and the great difficulties encountered in securing qualified teachers, and financing their schools, make more sympathetic supervision and assistance imperative if they are to develop a reasonably large group of recognized schools.

VI. RECOMMENDATIONS

The Supervisor of High Schools wishes to submit again the recommendation of two years ago printed on pages 131-132 of the Biennial Report of the State Superintendent for the biennium ending June 30, 1928, with the supplement given below:

1. Possibly the greatest need of Florida public schools today is for a state equalization fund which will be paid to the counties in direct proportion to their financial inability to meet the requirements of a minimum educational program. This fund need only to be large enough to guarantee to each county sufficient funds to meet the minimum program after they have made effort equal to that of every other county.

2. At present there is a need for someone to give full time to the coördination and direction of the State Curriculum Revision Program. It will probably require from one to two years to complete the present revision. It may be found advisable at some time in the future to have such a person attached permanently to the staff of the State Superintendent. Nothing, I believe, will promote professional growth among teachers as much as active participation in wisely directed curriculum work.

3. A change in the scholarship law that would allow the State institutions of higher learning to select the successful applicants for these scholarships is needed.

CHAPTER III.

Elementary Schools

The tabulations which follow show the activities in which the Supervisor was engaged during the period, and following these are certain data and discussions having to do with the elementary schools of the State.

TABLE I.

	1928-29	1929-30	Both
Time Spent:			
Days in office	198	129	327
Days outside office	127	173	300
Counties visited	26	47	73
Schools visited	105	320	325
Conferences with:			
County superintendents	7	22	29
Principals	10	11	21
Board members	5	3	8
Supervisors	8	6	14
Course of Study committee	0	3	8
District education committees	1	2	3
Librarians	1	0	1
Character education committee, F. E. A.	2	3	5
Committee on improvement of reading, English and arithmetic	2	1	3
Addresses:			
District education meetings	6	8	14
County education meetings	1	2	3
Principals and supervisors conference	1	1	2
Consolidation meeting	0	1	1
Summer school classes	3	3	6
Groups of teachers (study groups, etc.)	6	24	30
Student bodies	2	3	5
Parent-teacher associations	1	2	3
Florida Education Association	0	1	1
Negro state associations	1	1	2
F. & A. M. College	3	1	4
Radio lecture	0	1	1
Commencement	1	0	1
Surveys:			
Glades County	1	0	1
Partial testing programs	5	5	10
Financial	0	2	2
Building, etc. (for possible consolida- tion)	0	6	6
Industrial School	1	0	1
Orphanages (tests)	3	0	3

	1928-29	1929-30	Both
Educational Meetings Attended:			
N. E. A. Department of Superintendence	1	1	2
Regional Rural Conference (Nashville)	0	1	1
State Superintendents and other State Departments' representatives			
Southern States	0	1	1
Florida Education Association	1	1	2
District Education Associations	6	8	14

Miscellaneous:

Assisted in a meeting of High School and Elementary Principals of the Ocklocknee District for the study of supervision, February 28, 1929.

Assisted in scoring Ballast Point (Tampa) School building, May 10, 1929.

Taught for eight weeks at University of Florida Summer School, June 10-August 2, 1929.

Represented the State Department in selection of a State contestant for the Edison Scholarship, June 26-27, 1930.

STANDARDIZATION OF ELEMENTARY SCHOOLS

One important function of the Elementary Division during the biennium has been the standardization, or State accreditation, of elementary schools. Data with reference to some interesting facts connected with the accreditation movement are herewith given:

Early Standardization of Rural Schools

Some elementary schools were standardized by the State Department of Public Instruction as early as 1920. However, the requirements to be met were not well adapted to schools other than those found in the strictly rural communities. Improvement of the small country school was sought, and the purpose "to organize later a 'consolidated state-accredited school'" was set up as an objective to be attained at some future time. The early standards were definite and simply stated, but one of their serious deficiencies was that they were not well adapted to town and city schools.

The following tabular statement will give some idea of the extent of standardization under the early movement and the sizes of schools meeting the necessary requirements:

TABLE II.

	1921-22	1923-24	1925
Number of schools standardized	159	244	249
Counties represented	42	44	45
Percentage of schools standardized that were:			
1-teacher schools	31	25	28
2-teacher schools	25	31	27
3-teacher schools	16	12	12
4-teacher schools	11	13	10
5-or-more-teacher schools	17	19	23
Totals	100	100	100

Reference to this table leads to the following observations:

1. Standardization of rural schools had a rather rapid growth from 1921 to 1924.
2. Between 1924 and 1925 there was little increase in the number of standard schools.
3. The number of counties having standard schools did not increase materially during a period of four or five years.
4. Standardization during these first four or five years was confined largely to schools of 1 to 4 teachers.
5. The number of 5 or more teacher schools meeting requirements for standardization increased consistently from 1922 to 1925.

Standardization Under New Regulations

In the fall of 1925 it was decided to make a complete revision of the standards, and to make the new requirements applicable to all elementary schools—urban and rural alike. The cooperation of the school men and women of the State was enlisted and after many conferences had been held and suggestions received standards were agreed upon. These were adopted by the State Board of Education in February, 1926, and a few minor changes have been made from time to time since that date.

Table III will show in some detail some data with reference to standardization under the new regulations.

TABLE III.

	1926-27	1927-28	1928-29	1929-30
Limited Standard Schools	21	18	14	
Regulation Standard Schools	27	91	122	158
Superior Standard Schools	31	69	123	109
Total number of schools	58	181	263	281
Counties represented	19	33	45	45
Percentage of schools standardized that were:				
1-teacher schools	4	10	7	7
2-teacher schools	7	6	6	7
3-teacher schools	4	5	7	8
4-teacher schools	9	9	11	9
5-teacher schools	7	12	10	8
6-teacher schools	2	3	8	9
7-teacher schools	7	6	6	6
8-teacher schools	4	4	8	5
9-teacher schools	2	6	3	4
10-or-more-teacher schools	54	39	34	37
Total	100	100	100	100

Under the new plan of standardization four groups of standard schools are recognized, viz.: Exceptional, Superior, Regulation, and Limited. (See Standards for Florida Elementary Schools, July 1, 1928, page 7.) No Exceptional Standard Schools have yet been found in the State.

Inspection of Table III enables us to make the following observations:

1. The number of Limited Standard Schools is gradually decreasing.

2. The number of one-teacher, two-teacher, and three-teacher schools that are standardized is small as compared with the larger schools.

3. For the last three years the percentage of ten-or-more-teacher schools has remained practically stationary.

4. Schools of one to nine teachers are pretty evenly distributed on the list.

For the school year 1929-30 a new application blank was sent out for schools seeking standardization, and on this blank data concerning the certificates, training, etc., of teachers not asked for before was obtained. However, a number of principals reported on the old blank and this new data is for only 248 of the 281 schools standardized this year.

Table IV gives the number of teachers in standard schools who are holders of certain certificates and the percentage each number is of all teachers in these schools.

TABLE IV

Certificates	No. of Teachers	Percentage
Graduate State	972	48.9
Professional	5	.2
Special	20	1.0
Primary	290	14.6
First Grade	403	20.3
Second Grade	298	15.0
Total	1,988	100.0

Table V gives the numbers of teachers in standard elementary schools who have had various amounts of training for their work and the percentage each number is of the total number of teachers.

TABLE V.

Amount of Training	No. of Teachers	Percentage
Less than high school	24	1.2
1 year of high school	4	.2
2 years of high school	19	1.0
3 years of high school	31	1.6
4 years of high school	257	14.0
1 year of college	311	16.4
2 years of college	753	40.0
3 years of college	185	9.7
4 years of college	302	15.9
Total	1,891*	100.0

Table VI gives the college certificates and degrees held by teachers in standard elementary schools.

TABLE VI.

Certificate or Degree	No. of Teachers	Percentage
L. I. (certificate)	397	20.0
B. A. (degree)	212	10.6
B. S. (degree)	71	3.5
B. M. (degree)	7	.3
M. A. (degree)	8	.4
Miscellaneous (degrees)	15	.7
Total	710	35.5

* The total number here does not equal that in Table IV for the reason that reports on training were incomplete in some cases.

STANDARD ELEMENTARY SCHOOLS

For the Year 1928-29

Group I—A school of ten or more teachers.

Group II—A school of six to nine teachers.

Group III—A school of three to five teachers.

Group IV—A school of one or two teachers.

A Limited Standard School meets all Required points and at least 25% of the Flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all Required points and 25% of all Flexible points.

A Superior Standard School meets all Required points and 75% of the Flexible points.

An Exceptional Standard School meets all Required points, 75% of the Flexible points, has no teachers with less training than two years beyond a standard high school, the building scores at least 900 on the Strayer-Engelhardt Score Card, has ample playground space, well-kept lawns, trees, flower beds, etc., and the spirit of the school such as to attract the favorable attention of the casual observer.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, July 1, 1928.)

STANDARD ELEMENTARY SCHOOLS

For the Year 1929-30

Group I—A school of ten or more teachers

Group II—A school of six to nine teachers

Group III—A school of three to five teachers

Group IV—A school of one or two teachers

A Limited Standard School meets all required points and at least 25% of the flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all required points and 25% of the flexible points.

A Superior Standard School meets all required points and 75% of the flexible points.

An Exceptional Standard School meets all required points, 75% of the flexible points, has no teachers with less training than two years beyond a standard high school, the building scores at least 900 on the Strayer-Englehardt Score Card, has ample playground space, well-kept lawns, trees, flower beds, etc., and the spirit of the school such as to attract the favorable attention of the casual observer.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, July 1, 1928.)

THE STATE-WIDE TESTING PROGRAM

During the biennium the program for improvement of the teaching of certain common school subjects begun in 1926 was continued, special emphasis being given to improvement in arithmetic. Tests in reading and English were also given and remedial work in these subjects provided for, but inasmuch as certain results in these subjects were given in the report for the biennium ending June 30, 1928, some results in arithmetic only are here shown.

TABLE VII.

Improvement in Arithmetic for the Year 1928-29.
(Results for 43,623 pupils in 25 Florida Counties.)

	Computation	Reasoning
Grade III	9 months	6 months
Grade IV	11 months	6 months
Grade V	10 months	9 months
Grade VI	17 months	10 months
Grade VII	17 months	7 months
Grade VIII	19 months	12 months
Average Improvement.....	14 months	8 months

Examination of Table VII enables us to make the following observations:

1. Greater improvement was made in **computation** than in **reasoning**.
2. Greater improvement was made in both computation and reasoning in the upper than in the lower grades.
3. An average improvement of fourteen months per grade was made in computation.
4. An average improvement of eight months per grade was made in reasoning.

CURRICULUM REVISION

For several years revision of the elementary curriculum of 1924 has been considered a necessary piece of work, but it was not until the spring of 1929 that a beginning was made. The entire program of the Third Annual Conference of Elementary Supervisors held jointly with the High School Principals Conference at Gainesville, April 11-13, was devoted to curriculum revision and the joint resolutions committee for the High School Principals and Elementary Supervisors Conferences made the following resolution with reference to curriculum revision:

"Resolved, that this body heartily commend Superintendent Cawthon for his helpful attitude toward improvement of our State Courses of Study; and that we favor early steps toward a complete revision of the State Course of Study for all types and ranks of our public schools and that we request the State Superintendent and his staff to organize, as soon as possible, such a set-up as may seem most effective for accomplishing this revision."

In the set-up organized by the State Superintendent and a committee of educators called the "steering committee" the State Supervisor of High Schools and the State Supervisor of Elementary Schools were given certain duties in connection with the proposed revision of the courses of study. The Supervisor of Elementary Schools has worked with the High School Supervisor and others in:

1. The formulation of definitions of education, learning, the school, the curriculum, and subject matter.
2. The statement of the general aim of education.
3. The setting-up of objectives both for education as a whole and for each of the subjects making up the curriculum.

Study groups to help teachers become familiar with curriculum problems having been organized by principals throughout the State, members of the supervisory staff of the State Department met with as many of these groups as possible in the hope of being able to assist them in their study and to unify, as far as possible, the efforts being made by all.

The Supervisor of Elementary Schools met with twenty-four such groups during the months of January, February, and April, 1930.

It is hoped that during the year 1930-31 much progress will be made in the matter of curriculum revision, for subject committee chairmen have been appointed in the various parts of the State, and the teachers will begin production early in the fall.

SCHOOL PLANT VISITATION

During part of the months of March, April, and May, 1930, the Supervisor visited with the County Superintendents practically all of the white schools of six counties in the western part of the State. The purposes of the visits were:

1. To learn from actual contact the county school situation as a whole.

2. To know something of the actual difficulties facing School Boards and County Superintendents.

3. To find what school advantages the children of different communities are receiving.

4. To investigate first hand the qualifications of teachers, salaries paid, and the length of term in each school.

5. To make a county school map locating the various schools.

6. To ascertain the distances schools are apart, the suitability of each location, and the possibilities of consolidation of small schools into larger ones, or the transportation of children to larger centers already established.

Upon his return to the office the Supervisor wrote a letter to the County Superintendent of the county just visited and sent a copy to the Chairman of the County Board. The letter to County Superintendent, Mr. J. H. Ayers, of Jackson County, is typical of those sent to other counties, so it is here reproduced.

Tallahassee, Florida.

May 2, 1930.

Mr. J. H. Ayers,
County Superintendent Public Instruction,
Jackson County,
Marianna, Florida.

Dear Mr. Ayers:

Since my recent visit with you to your schools in Jackson County I have been away from the office almost continuously. This absence accounts for my failure to write to you before the present time.

I thoroughly enjoyed my stay in your county, and through your courtesy was able to form some definite idea of the extent and resources of this rich agricultural section. You and your School Board have a wonderfully fine opportunity to do a constructive piece of work for the schools of Jackson County, and I am encouraged to believe that through your combined efforts much improvement will be made.

Since my return to the office I have given some study to your county-wide situation as revealed by the notes taken at the individual schools. You have two pretty distinct classes of schools, viz.: (1) those in towns, and

(2) those that are typically rural. In the first class I have placed the schools at Marianna, Cottondale, Graceville, Campbellton, Malone, Greenwood, and Sneads; and in the second all the remaining white schools. The following tabular arrangement of data for your schools has been made from my notes and from the records in the office of the State Department.

Class	No. of Schools	No. of Teachers	No. of Pupils	Average	
				No. of Pupils per Teacher	Term
Town	8	100	2,734	27.3	8 mo.
Rural	29	91	2,299	25.3	5.9 mo.

Class	No. of Teachers With Some Col- lege Training	Certificate of the Median Teacher	Salary of the Median Teacher		Cost Per Pupil Per Year for Instruction
			(Mo.)	(Yr.)	
Town	62	Graduate State	\$80	\$640	\$27.20
Rural	4	Second Grade	\$55	\$325	\$16.03

In referring to my notes I find I did not ask you the length of term for your town schools, but am assuming that they have eight months.

Referring to the data in the table we are now able to make the following observations:

1. You have 8 town schools and 29 rural schools.
2. You have 100 teachers in the town schools and 91 in the rural schools.
3. There are 2,734 pupils enrolled in the town schools and 2,299 in the rural schools.
4. The average teacher in the town schools teaches 27.3 pupils; the average rural teacher 25.3.
5. A pupil in town goes to school 8 months in the year; one in a rural school 5.9 months, or less than three-fourths as long.
6. The town boy or girl is instructed by a teacher that has had two to four years of training beyond high school; the teacher of the rural child has not finished the work of a good high school.
7. The median salary of the town teacher is \$80 per month, or \$640 per year; that of the rural teacher is \$55 per month, or \$325 per year. The median salary for town teachers is only \$53.33 per month on a twelve months basis, and that of the rural

teacher only \$27.08 per month. You can not hope to get the best teachers for salaries such as you are now paying, for these amounts do not afford a living wage, to say nothing of the ability to meet the expense incident to professional growth.

8. The cost per pupil for instruction only is \$27.20 in town and \$16.03 in the country. The cost of instruction per white pupil enrolled for the entire State in 1928 was \$35.24.

From the records of Mr. M. R. Hinson, the State Supervisor of High Schools, I have found that the average annual cost per pupil for high school instruction in Jackson County is \$57.16. This average is based upon the salaries paid teachers of grades 7-12 in nine of your high schools. It was assumed that two-thirds of the salary of each high school principal could be counted in making up the total cost of high school instruction.

As compared with the cost of instruction for town schools—including both high school and elementary school—this amount is entirely too great. High school instruction is very expensive, and in a county like yours with a comparatively small number of pupils enrolled in the upper grades you can not afford the luxury of the number of high schools you now have. You should, in my opinion, maintain not more than three schools in which grades 10, 11, and 12 are organized, and possibly not more than eight or ten in addition to these that include grades as high as the ninth.

I believe you and your Board can well afford to consider the adoption of a plan for gradual consolidation of all your white schools into not more than about twelve or fourteen centers. The following consolidations can, in my opinion, be effected within the next few years:

1. Establish a school with grades 1-9 in the southern part of the County to include Rose Hill, Hickory Level, Silver Lake, Pittman Hill, and Hasty Pond. Send grades 10, 11, and 12 to Marianna.

2. To Alford bring Kynesville, Round Lake, and Compass Lake schools, and have grades 1-9 only.

3. Transport pupils from Pilgrim's Rest and Lovewood to Cottondale and maintain here a school with grades 1-9 only. Transport grades 10-11, and 12 from Alford and Cottondale to Marianna.

4. Transport grades 10, 11, and 12 from Campbellton to Graceville or from Graceville to Campbellton. There is no justification for two twelve-grade schools so near each other—especially

so since these two towns are connected by means of an excellent hard surfaced road.

5. Transport the pupils from Hickory Pond and Live Oak to Union and maintain here a school with grades 1-9 only. Send grades 10, 11, and 12 to Malone.

6. Transport all the pupils of Cove Springs to Marianna, and all above the sixth grade at Magnolia to Marianna.

7. Transport all of grades 10, 11, and 12 from Sneads to Marianna.

8. At Grand Ridge establish a nine-grade school and transport to this center the pupils now attending at Cypress, Pleasant Hill, Shady Grove, and Paront.

9. Transport pupils from Yon and Johnson to Alliance, but send grades 10, 11 and 12 from Alliance to Marianna.

10. Transport pupils from Hickory Grove and Concord to Malone and maintain here a twelve-grade school.

11. Maintain a six-grade school at Bascom, but send pupils of grades 7, 8, 9, 10, 11, and 12 to Malone.

12. Maintain a nine-grade school at Central, sending grades 10, 11, and 12 to Malone.

13. Transport Dellwood pupils either to Central or Greenwood.

14. Maintain a nine-grade school at Greenwood, sending grades 10, 11, and 12 either to Marianna or Malone.

This proposed plan may possibly include too many schools with grades as high as the ninth, but if the number of school centers is kept down to about fourteen for the entire county the matter of shifting upper grades to the three senior high schools can be attended to as the need arises.

The consolidation plan here suggested may be very far from the best that can be devised to meet your needs. You and your Board are on the ground and know your conditions and needs far better than an outsider can know them. You may be able to evolve an entirely different plan. Whatever the outcome, the State Department stands ready to help in any way possible, should our services be needed.

Yours very truly,

(Signed) R. M. EVANS,

State Supervisor of Elementary Schools.

Copy to Mr. H. B. Knapp,
Chairman of County Board.

Urgent School Needs

Five years of close contact with the elementary schools of the State have caused the supervisor of those schools to form some definite opinions with reference to their needs. Some of these needs can be met at some time in the near future, others may take a number of years for their accomplishment, and still others may be ideals to be closely approached but never fully realized.

The elementary schools of the State can not make much real progress until some or all of the following necessary improvements are made:

1. Teachers must be well trained. According to the results shown by a recent study* of the training of Florida teachers the median elementary teacher has had training, according to her position, as follows: Strictly rural—12 years; small town—13½ years; urban, 14 years. Inasmuch as these data are for the *median* or *average* teacher, there are many now employed in our schools whose training is less than that shown by graduation from a four-year high school. *Two years of training in an accredited college or normal school in addition to graduation from an accredited senior high school should be set as the minimum requirement for every new elementary teacher* to be employed in the schools of Florida on and after July 1, 1937.

2. A better equalization of salaries must be made. Better salaries will secure better teachers, and better teachers will require better salaries. A salary schedule for all teachers—elementary and high school alike—based upon training, experience, and success in teaching, and possibly to some extent upon cost of living, should be worked out and put into operation not later than July 1, 1937.

3. The curriculum must be kept equal to the best. Next to a good teacher the curriculum is the most important factor in a good school. The school work of an entire State can be immeasurably hindered by an antiquated curriculum; it can be wonderfully helped by modern adaptable courses of study. The teachers of the State are now working upon a new curriculum, and the entire State will no doubt be indebted to them for this piece of work when the new curriculum begins to function in the lives of the children. A continuous course of study com-

* Florida Educational Survey Report, 1929, Page 185.

mittee could perform a splendid service to the State by keeping the curriculum revised as the need demands.

4. The helping teacher a necessity. Only eleven of the sixty-seven counties of the State have been employing supervisors whose duty it is to help the inexperienced and weak teacher in her work, and to unify instructional procedure in the county. Although the number of supervisors is now entirely too small, it is rumored that three or four of the eleven will not be retained during the year 1930-31. The county superintendent, were he ever so well fitted by training and experience for this type of work, is too busy with administrative duties to supervise instruction and help the weak teachers find themselves. This being true, thousands of teachers are trying to do their work without any supervision whatever, and a large part of the *ten million dollars* paid annually in this State for salaries of teachers is bringing small returns because of the "lost motion" involved in undirected work. There is urgent need for one or more helping teachers in every county, and the State should assume the responsibility for financing a part of the cost of such supervisors.

5: Definite qualification for elementary principals should be set up. The holder of any legal certificate, no matter how low, can now be appointed to the position of principal of an elementary school. Many Florida elementary principals are well qualified to hold their positions, but the requirements should be so raised as to keep out the person unfitted for this important work. The entire character of a school is made or marred by the principal. Lack of touch with progressive movements and methods in education can retard the progress of a school immeasurably and the principal who is unwilling to grow professionally should be eliminated.

6. Consolidation. The arguments usually advanced for consolidation of schools are so well known that it is unnecessary to repeat them here. However, with her increasing number of good roads, Florida is in a position to demonstrate to the nation the possibilities involved in universal consolidation. Unwise consolidations should be avoided, and to that end every county should plan for a county-wide scheme of consolidation based upon data carefully gathered and analyzed by those qualified to do this kind of work. The plans need not require immediate

changes of a radical nature, but may be so formed as to allow for gradual changes; each change, however, being in line with the county-wide plan.

7. School and community libraries a necessity. No other agency perhaps has had more to do with arousing a hunger for education and a desire for culture than the reading of good books. Thousands of children of elementary school age in Florida are being deprived of their birthright in the matter of access to reading materials. Every county could, at small expense, provide traveling libraries for its schools, and these could be directed either from the county superintendent's office or from a central office in the State Department of Public Instruction.

8. Equalization of educational opportunity should become a reality. Children in urban and other well favored communities now enjoy educational opportunities far in excess of those of rural children. Thoughtful persons are coming to realize that a child should not be penalized for having been born in a poor community. Some of the agencies that may be invoked to bring about equalization of opportunity are:

(1) A large equalizing fund to be distributed by the State according to the needs of all children.

(2) Employment of none but the best teachers at a living wage plus provision for professional and cultural growth.

(3) Compact and systematic consolidation organization of the schools upon a county unit basis, with provision for the individual educational needs of every child.

(4) A good library in easy reach of every child.

(5) Every child to have a minimum school term of eight months under a well trained and efficient teacher.

9. The county as the unit of school administration and supervision must be retained. There is a rather strong tendency in the State to increase the powers of special tax districts and to diminish those of the county. Many thoughtful persons see in this tendency a widening of the line of demarcation between urban and rural schools, and a menace to equality of educational opportunity for all children. The county is the logical unit of school administration and supervision, and should be retained as such.

10. The county superintendency must be magnified and strengthened. Just as the county is the logical unit for the administration and supervision of our schools, so the county superintendent is the logical administrator and

and supervisor of those schools. In order that his highest efficiency may be secured and maintained the following qualifications are necessary:

(1) He shall be as well trained as the upper ten per cent of those working under his supervision.

(2) He shall be an individual with marked executive abilities.

(3) He shall be one who can select teachers and other co-workers with a fine sense of discrimination.

(4) He shall be a man of broad sympathies, deep moral convictions, and democratic outlook.

(5) He shall be an individual who does not cease to grow professionally.

CHAPTER IV.

Teacher Training In High Schools

The report is made under three headings:

- I. Teacher Training in High Schools.
- II. Teacher Training in Service.
- III. State Scholarships.

I. TEACHER TRAINING IN HIGH SCHOOLS

A. History of Development.

The problem of securing trained teachers has been a vital one in the development of the public schools in Florida. Teacher training work in high schools was first authorized by law in 1915. The purpose in the minds of those who sponsored the law was to raise the standard of training of elementary teachers to high school graduation—a purpose well in keeping with the low standard of preparation prevalent among the teachers of Florida at that time. Amendments to the law were made in 1917, 1923 and 1927.

The law of 1915 authorized the establishment of one Teacher Training Department in one high school of each county of the State under such rules and regulations as the State Board might adopt, provided that such high school have not less than ten pupils who were prepared and who would take the Teacher-Training course. The State Board should appropriate to each Teacher Training Department the sum of \$500.00 provided the County Board appropriate an equal sum or more to secure a competent teacher, all of whose time should be devoted to the Teacher Training Department. An appropriation of \$25,000 per year for two years was provided. In 1917 the appropriation was made continuous but was repealed in 1920 by its omission in the compilation of the Revised General Statutes.

In 1923 the legislature passed an act whereby the unused portion of the appropriation made under the 1915 act, which amounted to \$21,850.00, was made a continuing appropriation for the purpose specified in the Act of 1915. In 1925 the appropriation was raised to \$31,500.00 per year.

The certificate law of 1923 provided that graduates of the Teacher Training course in high school should receive a First Grade Certificate. The State Board of Education that year passed regulations setting up standards regarding the qualifications, salary and duties of the Teacher Training teacher, the duty of County Boards relative to Teacher Training, the eligibility of pupils and the standards required of schools offering Teacher Training.

In 1927 a new act of three sections was passed by the legislature. Therein provision was made for negroes on the same basis as for whites. The State Board was authorized to exercise supervision and funds were set aside for the State Subsidy for maintenance of these departments and for supervision. The certificate law of that year provided for Second Grade Certificates good through the eighth grade for graduates of Teacher Training Departments.

In 1929 the Teacher Training bill as passed by the legislature increased the State Subsidy for each department to \$600.00 per year provided that the County Board appropriate an equal sum or more to secure a competent teacher.

The influence of this program of legislation on the development of Teacher Training Departments in the high schools of the State may be seen from the following tabulation.

Year	No. High Schools Offering Teacher Training	Enrollment	No. Certificates Issued
1915-16	8	379	
1916-17	13	310

* Certificate law passed 1923 granting First Grade Certificates to Teacher Training graduates.

** Certificate law passed 1927 granting Second Grade Certificates to Teacher Training graduates.

B. Teachers of Teacher Training Departments in High Schools.

Regulations by the State Board of Education in 1923 set up a requirement of a Graduate State Certificate based on four years of college work for a teacher of a Teacher Training Department. The State Supervisor has attempted to lead county and local officials to secure teachers who had in addition to the required certificate some specialized college work in elementary education and who had had some experience in teaching, especially in the elementary schools. There has been evidence both on the part of officials, teachers and the state colleges of an increased interest in definite work in elementary education as preparation for the work of Teacher Training in high school.

Another encouraging evidence has been the longer tenure of Teacher Training teachers. In 1927-28 of the 36 Teacher Training teachers in the high schools of the State, 25 were new in their positions that year and 23 inexperienced in Teacher Training work. In 1928-29, 16 (3 new departments) were new in their positions and 11 were inexperienced in Teacher Training work. In 1929-30, 18 (4 new departments) were new in their positions and 12 inexperienced in Teacher Training work.

The increased salary provided by the law of 1929 for the position of Teacher Training teacher has tended to attract and hold better qualified teachers. Needless to say, the efficiency of the work is largely influenced by the efficiency of the teacher.

C. Graduates of Teacher Training Departments in High Schools.

The primary purpose of the Teacher Training Departments in high school has been to encourage those who would teach without college training to graduate from high school with an elementary course in education to the end that the standard of training of elementary (especially rural) teachers might be raised to the level of high school graduation.

Observation has led to the conclusion that the Teacher Training courses have served a secondary purpose or purposes in that they have in many instances acted as vocational guidance courses in which students have found their interests and abilities.

Always there has been held before the students the idea that training in high school is not sufficient preparation for teaching. As a result numbers of the graduates expecting to teach during the winter have gone to summer school and begun work on their college courses. A number, discovering their vocational inclinations, have gone on to college for the next regular session to take the college training for teaching.

We have made some investigations along this line by personal interview and by questionnaire regarding the classes of the past three years. The results are given below without any claim that they are accurate.

Year	No. Graduated Yr. Previous	No. Certificated	No. Who Taught	No. Who Went to College
1927-28	253	249	105	22
1928-29	335	230	110	79
1929-30	272	121 up to to June 20, '30	184 want to teach	60 plan to go to col- lege.

There is some duplication in items 3 and 4 in that some who taught also went to college during the summer.

It is evident that there is considerable disparity between:

1. The number who have graduated and the number who have been certificated;

2. The number who have been certificated and the number who have taught.

It is possible that the disparity depicted in (1) may be explained by the fact that a few students have taken Teacher Training for credit only, and have had no real interest in teaching and some have gone on to college for further preparation for teaching. We are convinced, however, that a large part of this disparity is explained by the failure of Teacher Training graduates to secure teaching positions. This is quite evident in a comparison of items 2 and 3. In other words a large number of those certificated have failed to secure positions to teach. Under D of this report we attempt to analyze this situation.

D. The Future of Teacher Training in Florida High Schools.

In 1926-27 there were 31 Teacher Training Departments in Florida High Schools.

In 1927-28 five new departments were organized, making a total of 36.

In 1928-29 five departments were disbanded and four new ones were organized, making a total of 35.

In 1929-30 five departments were disbanded and three new ones organized, making a total of 33.

In ten counties in which the work has been disbanded during the last three years the reason as given by the officials has, in most cases, been that there was an over-supply of trained teachers available.

The Educational Survey Commission in reporting to the legislature of 1929 gave these facts which relate to this question:

"(1) Total output of all public Teacher Training institutions (for whites) in Florida (including high school Teacher Training classes) in 1926-27 was 415.

"(2) Of these, 307 were elementary, 108 were secondary teachers.

"(3) Based on experience it is estimated that 212 of the elementary graduates taught the following year.

"(4) There were 688 new elementary teachers in white schools of Florida, 1927-28.

"The total output of all public training institutions in the State (212) was 31% of the number of new elementary teachers employed in the State.

"The question naturally arises, from what sources do the elementary schools of the State recruit most of their teachers? *Quite obviously a large number of the young women who enter the elementary school are certified on the basis of examinations and lack entirely any organized professional training for their work.*"

From another section of the report (Educational Survey Commission Staff Report—Page 183) we get the statement that 49% of the white elementary teachers of Florida have had two years of training beyond high school, 12.8% have had less than four years of high school preparation, and 3.6% of the secondary school teachers have not completed four years of high school.

Approximately 4,024 elementary teachers and 2,505 secondary teachers were included in the study. Using these figures 12.8% or 515 elementary teachers and 3.6% or 93 secondary school teachers (total 608) have had less than high school training. It would seem that the annual output of the Teacher Training Departments of Florida high schools—approximately 300—could well be used to raise

the standard of teacher preparation to the level of high school graduation.

When the standard of training of elementary teachers the State over has reached the point that teachers with less than high school graduation have been eliminated the Teacher Training Departments will not be needed. But as long as the less-than-high-school-graduate type is so largely in evidence we would wish that officials in charge of teacher appointments could gradually substitute the Teacher Training graduates from high schools for the teachers not so well prepared.

Whether the counties that have disbanded Teacher Training and those that have never made use of it are using the college-trained teachers is a question we should like to investigate were accurate records available.

There is encouraging evidence in the fact that a few counties have officially set up a standard of requiring at least two years of normal training of all new teachers employed and setting a time at which all old teachers in the county must reach the standard. But there is indication, also, that many school positions are filled on the basis of personal selection with no vision of the importance of training as a criterion.

Suggested legislation for 1931 would set up a standard of two years of college training as a minimum to be reached by all teachers in service in Florida by 1935, and a standard by which all new teachers henceforth shall be selected. To support such legislation careful studies are needed in the question of supply and demand, tenure, salary and training of teachers that would take into account the same problems relative to negro teachers.

It is extremely gratifying to see the way in which county superintendents are taking advantage of the Teacher Training in High School Plan to help correct the tremendous shortage in negro teachers.

II. TEACHER TRAINING IN SERVICE

The Teacher Training Supervisor is a strong adherent to the belief that training of teachers in service is a most valuable type of training and should be one of the largest functions of supervision. During 1929-30 much of the supervision of the Elementary and High School Divisions of the State Department of Public Instruction has cen-

tered around the project of professional group study by principals and teachers in service.

The subject suggested for study was curriculum construction—in keeping with the program of curriculum revision that has been undertaken throughout the State. It is expected that teachers in service in the State will have a large part in the work of revision. In order that there may be unity in the product it is necessary that all those individuals participating should agree on aims of education, and other points of an educational philosophy. Such agreement should be the result of reading and study. It was our hope that through a program of professional group study on the principles of curriculum construction the teachers in service over the State might be prepared to take part in the production of revised courses of study.

During September of 1929 a Course of Study on the Principles of Curriculum Construction was prepared by Mr. B. O. Smith, Supervising Principal of the Tallahassee schools and the writer, in a form suitable for a year's program of study for professional groups meeting twice per month. A carefully chosen list of texts and reference readings were suggested and topics and questions for discussion and written assignments were given. Copies of this outline were sent to all principals of elementary and high schools of the State with a letter of explanation and a request that it be used for professional study during 1929-30. One hundred thirty-three (133) principals responded that they wished to carry on a program of study based on the outline.

During January, February and March of 1930, the State Supervisor of Elementary Schools, the State Supervisor of High Schools and the State Supervisor of Teacher Training made it a project to visit—either singly or together—all of the schools enrolled in the program of study and take part in a meeting for discussion of the subject of curriculum. These visits were both pleasant and profitable. Many instances were found of very interested and enthusiastic groups carrying out a program of study and discussion on curriculum construction.

The work started in professional group study was a very promising beginning. We hope the project will be continued and that teachers in service in Florida may participate every year in a program of study based on some vital need and interest of the teaching profession of the State.

(ONE TO BE FILLED FOR EACH TEACHER TRAIN-
ING DEPARTMENT MAINTAINED.)

To the State Board of Education:

This is to make application for the establishment-main-
tenance (underscore one word) of the Teacher Training
Department in the High
School situated in (City)

..... (County for the year
1930-31. We hereby nominate as teacher of this depart-
ment, whose address
for the summer is

We hereby assume the responsibility of fully comply-
ing with the Act of the Legislature and Regulations of
the State Board of Education relative to Teacher Train-
ing in High School.

Signed

County Supt.

.....
Chairman County Board.

.....
Principal.

III. STATE SCHOLARSHIPS

During the last three years considerable attention has been devoted in this office to the carrying out of the provisions of the law providing for State Scholarships (Chapter 9134 of the Acts of 1923, amended by Senate Bill No. 284 of 1927).

During the spring of 1929 a study was made by means of all available records and by means of a questionnaire to each student who had used a State Scholarship. As far as possible the data have been brought up to date and are given below:

1. Number of Scholarships Awarded

County Scholarships

	University of Florida		Fla. State Coll. for Women	
	Regular Session	Summer School	Regular Session	Summer School
1923-24	42	2	62
1924-25	49	7	61
1925-26	49	14	61	8
1926-27	45	1	57	5
1927-28	59	7	77	4
1928-29	58	16	83	17
1929-30	55	12	73	8
Total...	357	59	474	42
	159 different persons		183 different persons	

Senatorial Scholarships

	University of Florida		Fla. State Coll. for Women	
	Regular Session	Summer School	Regular Session	Summer School
1927-28	33	37
1928-29	37	36
1929-30	36	6	35	4
Total	106	6	105	4

2. State Funds Advanced to Scholarship Students

(Our estimate—not checked by Comptroller's books.)

County Scholarships:

University of Florida	
357 at \$200	\$71,400
59 at \$ 50	2,950

Fla. State College for Women	
474 at \$200	\$94,800
42 at \$ 50	2,100

Senatorial Scholarships:

106 at \$200	21,200
6 at \$ 50	300

105 at \$200	21,000
4 at \$ 50	200

Totals\$95,850

\$118,100

GRAND TOTAL\$213,950 up to June 1, 1930

3. Attendance of Scholarship Students

(Including both County and Senatorial Scholarships.)

	New Awards	Years Spent at University of Fla.			
	Total	1 Yr.	2 Yrs.	3 Yrs.	4 Yrs.
1923-24	42	3	12	12	15
1924-25	10	2	2	4	2
1925-26	14	2	4	3*
1926-27	12	4	8*
1927-28	38	16	22*
1928-29	22	22*
		45	40	28	20

	New Awards	Years Spent at F. S. C. W.			
	Total	1 Yr.	2 Yrs.	3 Yrs.	4 Yrs.
1923-24	62	8	24	12	18
1924-25	7	2	1	1	3
1925-26	26	2	10	1	13*
1926-27	11	2	3	6*
1927-28	51	7	44*
1928-29	20	20*
		41	82	20	34

* In school now (June, 1928).

Average years spent in U. of Fla., 2¼ years.

Average years spent in F. S. C. W., 2 1-8 years.

4. Teaching Done by Those Who Have Held County Scholarships

Date of Relinquishing Scholarship	University of Florida. Number who have taught:			
	1 Yr.	2 Yrs.	3 Yrs.	4 Yrs.
1923-24
1924-25
1925-26	1	1	4
1926-27	2	10
1927-28	8	5
1928-29	2
	13	16	4

Date of Relinquishing Scholarship	F. S. C. W. Number who have taught:				
	1 Yr.	2 Yrs.	3 Yrs.	4 Yrs.	5 Yrs.
1923-24	1	1
1924-25	1	2	1	7
1925-26	1	1	9
1926-27	3	12
1927-28	4
1928-29
	9	14	11	7	1

Average number of years taught at U. of F.—1 2-3 years.
Thirty-two teaching in public schools during 1928-29.

Average number of years taught at F. S. C. W.—
Thirty-seven teaching in public schools during 1928-29.

5. Cancellation of Notes.

(Up to June 30, 1930)

U. of Fla.—22 persons have cancelled their obligations by sending testimony of teaching 2 years.

Two persons have paid some money—partially repaying debt.
F. S. C. W.—54 persons have cancelled notes by testimony of teaching.

Interpretations

A total of 831 County Scholarships during regular sessions and 94 during summer sessions have been used at the two state institutions since 1923. These scholarships have been used by 342 different persons. A total of 211 Senatorial Scholarships during regular sessions and 10 during summer sessions have been used since the amendment providing for these was passed in 1927.

Item 3 shows that the average scholarship student stays 2 $\frac{1}{4}$ years at the University of Florida and 2 1-8 years at the Florida State College for Women. We have no records to show whether those who have relinquished scholarships have graduated or have quit school without graduating. However, most persons to whom scholarships are awarded are just graduated from high school. This average seems to indicate that the average scholarship student does not complete four years at either of the state institutions.

Item 4 is based on a questionnaire sent to all those who have used State Scholarships. The returns to these questionnaires were very limited. According to their replies, 69, or 29% of the 203 persons who had used and relinquished the County Scholarships by 1928 were in 1929 teaching in the public schools of Florida. And these persons had taught on the average of two years.

Item 5 indicates that up to June 30, 1930, 76 persons had fulfilled the obligation of teaching two years and two had repaid part of the money advanced.

All of these facts lead us to conclude that:

1. (Item 3) The method of selecting scholarship students by competitive examination alone does not tend to select students who successfully complete four years of college training.

2. (Items 4 and 5) The persons who have used the State Scholarships have not in a majority of cases felt any obligation to fulfill the requirement of teaching two years in the public schools or refunding the money to the State. It is, of course, the purpose of the law to provide training for professional teachers who will continue in the profession longer than two years.

IV. RECOMMENDATIONS

1. That Teacher Training in the high schools be discontinued when the State as a whole will have reached the level of high school graduation for all teachers in service in the State.

2. That until such level will have been reached officials in charge of teacher selection use Teacher Training graduates from high schools in preference to teachers certificated by examination only. A more definite policy on the part of county officials relative to Teacher Training is much needed.

3. That each county outline a program for raising requirements for teachers.

4. That the State Department of Public Instruction sponsor each year a program of professional study in keeping with the needs and interests of the teachers of the State; and that this program be worked out in collaboration with the Extension Division of the State College and University in order that correspondence and extension work and the professional group study program may have as much relation as possible.

5. That county officials require all teachers in service to take part in a program of professional study.

6. That the present State Scholarship fund be converted into a loan fund to be administered by the state colleges. This is in accordance with the recommendations of the Survey Commission in 1928.

CHAPTER V.

Negro Schools

REPORT OF DISBURSEMENTS OF ROSENWALD AID-SCHOOL BUILDINGS

PLAN FOR DISTRIBUTION OF ROSENWALD AID IN CONSTRUCTION OF BUILDINGS

Year Beginning July 1, 1930, and Ending June 30, 1931

1. The Julius Rosenwald Fund cooperates with State Departments of Education in efforts to provide and equip modern public schoolhouses for the Negroes of Southern States. Such equipment as desks, blackboards, heating apparatus, ample vocational training facilities for both boys and girls, libraries, and sanitary privies is deemed of equal importance with the schoolhouses themselves.

2. Aid will be granted toward the construction and equipment of schools from two- to six-teacher types where the term is at least six months, seven or more months being preferred, and for schools above a six-teacher type where the term is to be at least eight months.

3. The site on which the school is to be located must contain at least two acres of land deeded to the public school authorities and be approved by the State Department of Education in order to qualify for aid by the Fund. In larger schools more land should be provided to furnish ample playground facilities, agricultural plots, vocational shops, teachers' homes, parking space, etc.

4. Every building—school, teachers' home and vocational unit—must be erected on community school plans furnished by the Fund or on plans prepared by State Departments of Education or by school architects and approved by the Director for Southern Schools before construction is begun. When an architect is employed sketches of plans should be submitted for approval before being drawn in complete detail.

5. Applications for aid will be made in triplicate by the County Superintendent through the State Department of Education on blanks furnished by the State Department.

In addition to the amount appropriated by the public school authorities, it is expected that the Negroes themselves contribute money, material, or labor at every school where the Fund gives aid. When the building is fully completed and equipped final inspection is to be made by an authorized representative of the State Department of Education and report submitted in triplicate on regular forms to the Director of Southern Schools. When this is approved payment of the Fund's obligation will then be made through the State Department of Education.

6. Aid for the construction of school buildings will be given in towns and cities as well as in rural areas to schools which offer at least the first two years of high school work, it being understood that schools located in towns and cities shall have adequate vocational buildings or units for both boys' and girls' work and a trained teacher for each.

7. Allotments will be made for larger types of school buildings—seven-teacher or more—only after study by a representative of the Fund of the needs of the community with special reference to high school work, to vocational training and to the consolidation of schools.

8. Aid for the construction of industrial units will be given on the understanding that adequate equipment shall be installed and one or more teachers with vocational training employed.

9. Special aid for equipping vocational buildings—\$100 per room—will be offered on the understanding that the contribution of the Fund will be not more than one-third the total sum expended for such equipment—the equipment to be selected by or with the approval of the state supervisors of agriculture, of trades, and of home economies.

10. Aid will be given in the construction of a selected number of teachers' homes in connection with Rosenwald schools of three-teacher type or larger where the annual school term is at least eight months. In allocating aid for teachers' homes preference will be given to consolidated schools where trained teachers are employed.

11. Wherever aid is given the local school authorities are to agree to carry a reasonable amount of insurance on the building and furniture.

SCHEDULE OF TYPE ALLOTMENTS FOR CONSTRUCTION

Year Beginning July 1, 1930, and Ending June 30, 1931

The allotments on school buildings from two- to six-teacher types and vocational units are as follows:

SCHOOL BUILDINGS

TYPE	Kind of Construction	
	Wood	Permanent
Two-Teacher	\$ 400 (a)	\$ 400 (a)
Three-Teacher	700	850
Four-Teacher	1,000	1,200
Five-Teacher	1,500	1,750
Six-Teacher	2,000	2,600

(a) Aid for two-teacher type to be discontinued July 1, 1931.

VOCATIONAL BUILDINGS

TYPE	Kind of Construction	
	Wood	Permanent
One-Room	\$ 300	\$ 350
Two-Room	500	600
Three-Room	700	850
Four-Room	900	1,100
Five-Room	1,100	1,350
Six-Room	1,300	1,600

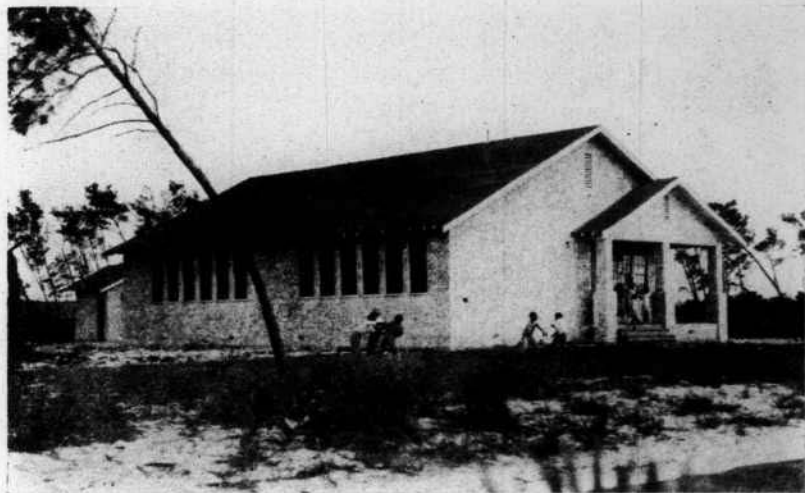

The allotments for school buildings above the six-teacher type and for teachers' homes, aid for which is not allocated to states except on specific applications after careful study by a representative of the Fund and of the State Department of Education, are as follows:

SCHOOL BUILDINGS

TYPE	Kind of Construction	
	Wood	Permanent
Seven-Teacher	\$2,500	\$3,350
Eight-Teacher	3,000	4,000
Nine-Teacher	3,400	4,500
Ten-Teacher	3,800	5,000
Eleven-Teacher	4,200	5,500
Twelve-Teacher	4,500	6,000
Additional Classrooms	150	200

TEACHERS' HOMES

TYPE	Kind of Construction	
	Wood	Permanent
Four-Room	\$ 450	\$ 550
Five-Room	600	725
Six-Room	750	900
Seven-Room	900	1,075
Eight-Room	1,050	1,250
Nine-Room	1,200	1,375

The above picture was taken of the Rosenwald schoolhouse at Boynton, Palm Beach County, after the hurricane in September, 1928. This schoolhouse, constructed according to Rosenwald specifications, suffered less damage than any schoolhouse in Palm Beach County. It cost only \$86.00 to completely repair the house. Many of the homes and public buildings constructed of light frame work, without sub-flooring, storm sheathing, and heavy studding, were badly damaged while others were completely destroyed. The terrific wind tore roofs and walls from poorly built houses carrying parts many feet, and in some instances miles. People seeking refuge in the Boynton Rosenwald schoolhouse were safe while others who sought protection in the cheaply constructed buildings sustained serious injuries and death. The twisted, bent and broken pine trees near the Boynton school give evidence of the destructive force which this building withstood.

The pictures on pages 156-157 show the remains of schoolhouses that were not built according to Rosenwald specifications. With Rosenwald aid and county funds Superintendent Youngblood rebuilt all the other Negro schoolhouses in Palm Beach County according to Rosenwald specifications.

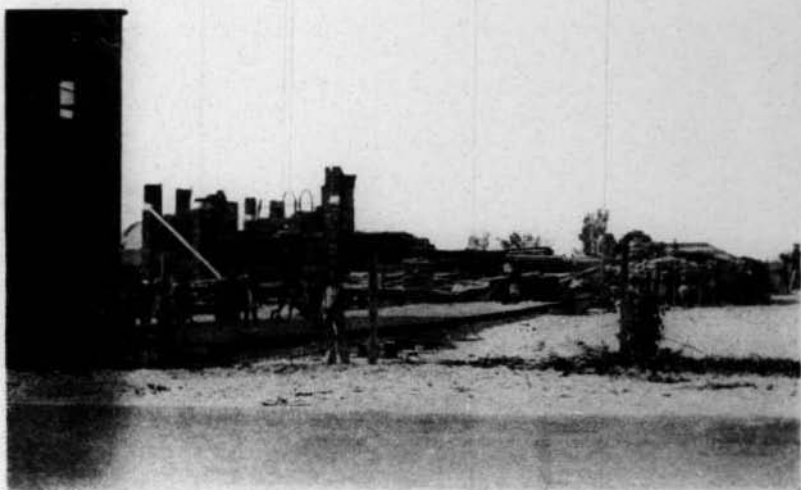

Remains of Improperly Built Schoolhouses Destroyed by the Hurricane of 1928.

Remains of Improperly Built Schoolhouses Destroyed by the Hurricane of 1928.

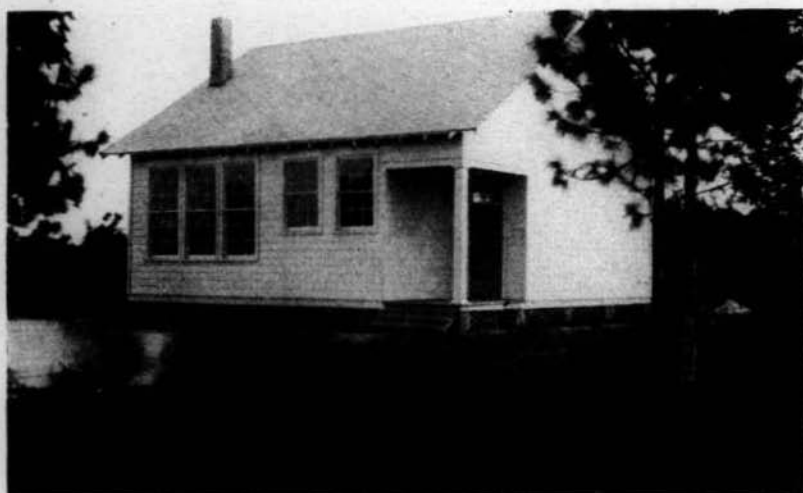

In considering good roads, paved streets, and some other phases of tax-supported improvements for general public benefit, Florida and North Carolina are comparable in many respects. However, in the construction of public schoolhouses for Negroes, with Rosenwald aid, North Carolina leads all the southern states and Florida is at the other end as is shown by the following list of states, and corresponding numbers of Rosenwald buildings:

North Carolina	784
Mississippi	587
Texas	474
South Carolina	473
Louisiana	412
Alabama	397
Arkansas	360
Virginia	360
Tennessee	350
Georgia	228
Oklahoma	186
Kentucky	144
Maryland	137
Florida	116

Rosenwald aid for the construction of schoolhouses for Negroes has been available in Florida since January, 1920. The tardiness with which Florida school officials have used this gift indicates their lethargic provision for Negro schools. The pictures on page 159 show typical one-teacher Negro schoolhouses in Florida. The pictures on pages 160 to 163 show typical public schoolhouses for Negroes constructed with Rosenwald aid.

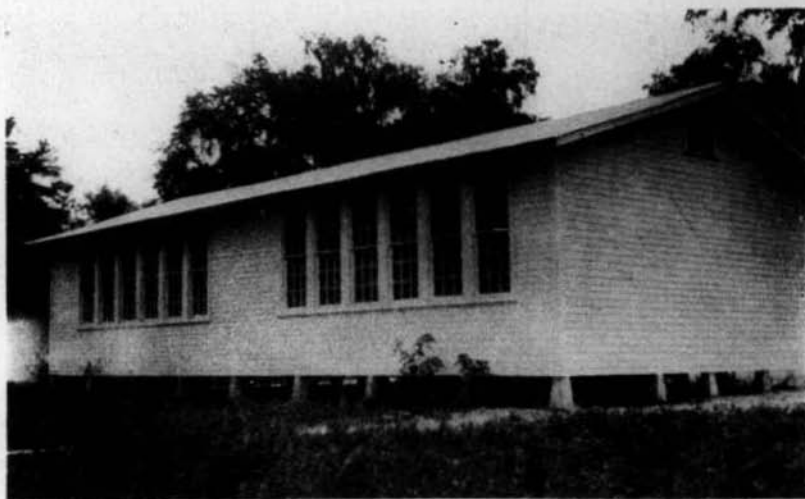

Front and Rear View of a One-teacher Rosenwald Schoolhouse in Leon County—Bellaire.

Front and Rear View of a Two-teacher Rosenwald Schoolhouse in Alachua County—Micanopy.

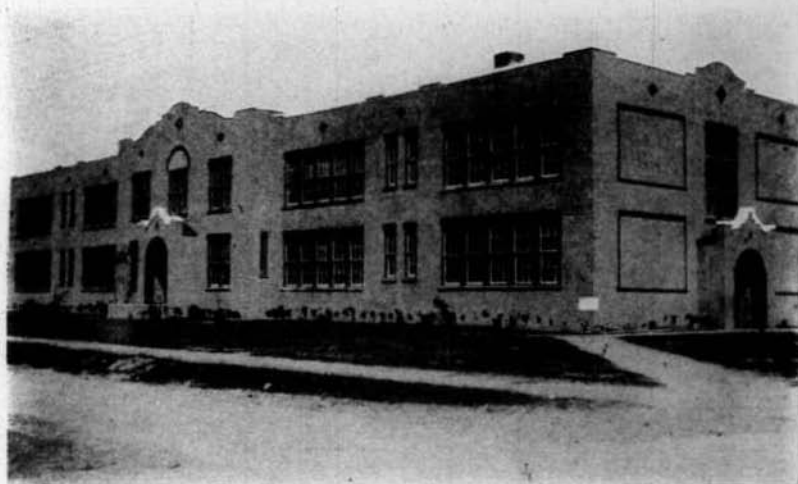

A Three-teacher Rosenwald Schoolhouse in Marion County—Oklawaha.

A Seven-teacher Rosenwald Schoolhouse in Indian River County—Gifford.

A Seventeen-teacher Rosenwald Schoolhouse in Lee County—Fort Myers.

A Nine-teacher Rosenwald Schoolhouse in Madison County—Madison.

TERM EXTENSION

EXTENSION OF SCHOOL TERMS AND DISTRIBUTION OF ROSENWALD FUND—1928-29
In accepting aid of one-half the salaries the first year, one-third the second year, and one-fourth the third year from the Julius Rosenwald Fund, the school authorities agree to carry on the extended term without further aid.

COUNTY	SCHOOL	No. Grades	No. Teachers	No. Enrolled	Former Term	Extension	Present Term	CONTRIBUTIONS FOR EXTENSION

								\$ 5,829.84	\$ 5,180.17

LIBRARIES

Elementary Libraries

The Rosenwald Fund aids School Boards and County Superintendents to buy libraries for Negro schools. The library contains 155 volumes, and costs \$120.00, one-third of which cost is paid by the county, one-third by the Negroes themselves, and one-third by the Rosenwald Fund. These books have been selected by the American Library Association and this library has been especially compiled for Negro schools. There are two sets of elementary libraries. Set No. 2 is available to schools already possessing set No. 1.

High School Libraries

The Fund helps school authorities to buy high school libraries of two sizes. The \$120 high school set, available to two-year high schools or larger, and the high school set costing more than \$120, but not more than \$600, available to 4-year high schools not necessarily accredited and located either in the city or the country. In purchasing these books the school authorities, Fund, and Negroes each contribute one-third the cost. The Fund purchases the \$120 high school set and in addition to \$40 aid pays the transportation charges. The list of books for high school libraries has been prepared by the Nashville office under the editorial supervision of Mr. Jackson E. Towne, Librarian of Peabody College and Consultant in Library Service for the Julius Rosenwald Fund.

The books selected were taken in the main from the following lists, preference being given to those books appearing on a majority of these lists: (1) Southern States' high school library list; (2) Miss Florence Curtis' list; (3) Standard Catalogue for High School Libraries; and (4) the new A. L. A. 500-book high school library list. The list has been submitted to and approved by the Southern State Departments of Education, including several State High School supervisors and State librarians. Much thought and time have been given to this selection with the hope of securing an inclusive list that will serve present needs of the average four-year high school or county training school.

Any four-year public Negro high school may receive aid, (1) in the purchase of the library set, and (2) in addition, one-third the cost of books selected from this list—up to \$200 from the Fund—toward the purchase of a maximum of \$600 worth. Where a school desires to qualify under both (1) and (2) it would be possible to receive \$240 in aid toward the purchase of \$720 worth of books. In receiving aid for these libraries the school authorities agree: (1) to furnish bookcases with substantial locks; (2) to see that the books are well used and cared for; (3) to abide by the rules and regulations furnished by the State Department of Education; (4) to make such annual reports as may be required.

In the school year of 1928-29, thirty-six \$120 libraries were purchased by counties as follows: Alachua, 3; Broward, 5; Columbia, 1; Duval, 1; Franklin, 1; Indian River, 2; Lee, 1; Marion, 2; Orange, 3; Palm Beach, 10; Polk, 3; Seminole, 1; Volusia, 3.

In 1929-30 eighteen libraries were bought as follows: Of the \$120 elementary libraries Hillsborough bought 8; St. Johns, 2; Leon, 1; Lee, 1; Sarasota, 1; Escambia 1; Duval, 1. Of the \$120 high school libraries Gadsden bought 1. Of the \$600 high school libraries Hillsborough bought 1; Volusia, 1.

TRANSPORTATION OF SCHOOL CHILDREN AND DISTRIBUTION OF ROSENWALD FUND—1929-30.

In accepting aid from the Fund for transportation, one-half the cost the first year, one-third the cost the second year, and one-fourth the third year, the public school authorities agree to continue the service at the end of the period without further aid. It is understood that the school term is not to be less than six months and no teacher's salary less than \$50 per month. The type of bus used is to be approved by the State Department of Education and the Fund.

COUNTY	SCHOOL	No. Grades	No. pupils Transported	No. Trips Daily	No. Miles Daily	School Term	Cost of Operation	Contributions	
								County	Rosenwald
Duval	South Jacksonville	8	195	4	110	9	\$ 3,330	\$ 2,330	\$ 1,000
St. Lucie	Fort Pierce	12	70	4	90	8	1,720	860	860
Total			265				\$ 5,050	\$ 3,190	\$ 1,860

DISTRIBUTION OF RADIOS AND ROSENWALD FUNDS

The Rosenwald Fund will aid Negro public schools to purchase radios. The set is available for four-teacher or larger Negro public schools (either rural or city). It is furnished at exact cost. The transportation charges will be paid by the Fund in addition to the share of one-third the cost of the radio: (a) \$25 aid on the \$75 battery radio set and (b) \$30 aid on the \$90 all-electric nine-tube radio, each to be shipped by prepaid freight, complete, ready to install, with tubes, aerial and lightning arrester.

COUNTY	SCHOOL	No. Grades	No. Pupils Enrolled	No. Teachers	Total Cost	Contributions	
						Negroes	Rosenwald Fund
Polk	Lakeland	6	151	4	\$ 90.00	\$ 60.00	\$ 30.00
Hillsborough	Tampa	6	861	16	90.00	60.00	30.00
Hillsborough	Tampa	12	621	19	90.00	60.00	30.00
Total					\$ 270.00	\$ 180.00	\$ 90.00

THE WORK OF THE SUPERVISING INDUSTRIAL TEACHERS

The Jeanes Fund

Some of the county superintendents in the State have not seen all the Negro schools in their respective counties. Hence, they do not know the condition of the buildings used as schoolhouses, the water and toilet facilities provided for the schools, the lack of teaching equipment, the poor distribution of free text-books, and the quality and amount of teaching done in the schools. Through lack of information about the schools in addition to other reasons the county superintendents are unable to fully execute their duties regarding these schools. In the counties with large Negro populations the school boards should employ county supervisors to assist the superintendents to supervise the Negro schools. Hillsborough County has done this for several years and Duval County has employed a supervisor for one year.

The Jeanes Fund stimulates school boards to employ supervisors of Negro schools by contributing toward the payment of the supervisors' salaries. In addition to helping county superintendents as described above these supervising industrial teachers, or Jeanes teachers as they are often called, teach the essentials of home making to girls in the rural schools, help improve class-room teaching, give health instruction, and raise money to supplement teachers' salaries, to extend school terms, to build schoolhouses, to buy school equipment, to make repairs and to buy libraries. Their activities for the biennium are summarized below. As in other developments in Negro schools the other Southern States far surpass Florida in this activity.

ANNUAL SUMMARY OF THE JEANES WORK
1928-1929

COUNTIES	TEACHER	No. Negro Public Schools	No. Schools Visited	Total Visits	Length Term	Money Raised	Annual Salary	Source of Salary	
								Jeanes Fund	County Fund

**THE COUNTY TRAINING SCHOOLS
THE SLATER FUND**

In the more rural counties the school terms are usually four months. The largest school in each of such counties should operate eight months, employ qualified teachers, and provide an opportunity for students to get more and better education. Some kind of Vocational and Industrial teaching should be done in these schools. County school officials are helped to make these improvements through money from the Slater Fund which helps to pay salaries of teachers and buy industrial equipment. State and Federal financial aid is available on the Vocational work in Agriculture, Home Economics and Trades. Schools receiving aid from the Slater Fund are called County Training Schools. The disbursements of the Slater Fund and some features of these schools are summarized for the biennium.

GENERAL CONDITIONS

The estimated Negro school population of Florida is more than 141,000. The enrollment of Negro school children in 1928-29 was approximately 90,000, leaving approximately 50,000 children not enrolled in school. Ninety-eight per cent of the enrollment are in the first eight grades of school and 70 per cent of the enrollment are below the fourth grade. These figures represent the entire state and not specific conditions in individual rural schools or counties. Naturally the percentage of pupils in the lower grades in such schools is even greater.

The average school term for Negro children in 1928-29 was 130 days. This term compares favorably with the terms provided for Negro children in other southern states. However, this average does not give a true picture of specific conditions. Those counties having large cities provide terms of eight and nine months for the city schools, whereas the rural schools in the counties are given terms as short as four months. The more rural counties and especially those counties with large Negro populations provide terms of eight months for the Negroes in the one large town in the county, whereas the other schools in the county are given terms of four months. To illustrate, Marion County has 52 Negro schools. In 1929-30, 737 pupils in Ocala were provided a term of eight months, 229 pupils in Dunnellon were provided a term of six months, and 2,421 pupils in 50 other schools were provided terms of four months. This is perhaps a little better than an average condition in such counties. During 1928-29, Indian River County failed to provide a school term for the 525 Negro children in the county. During 1929-30, many Negro schools in Alachua County operated only two months.

The average monthly salary paid Negro male teachers in 1928-29 was \$80, and the average monthly salary paid Negro women teachers was \$60.80. These averages do not seem low but they are misleading. The writer visited one school where the teacher was paid \$15 monthly for her service and many schools where teachers were paid \$20 monthly. Of the 866 Negro schools in Florida, 523 are of the one-teacher type. The lowest salaries are paid in schools of this size where the term is shortest, work is hardest, and the poorest buildings, furniture, and teach-

ing equipment are provided. Needless to say, the poorest trained teachers are employed in these schools. The average annual salary paid Negro teachers in one- and two-teacher schools in 1928-29 was \$182.

SPECIFIC CONDITIONS

County Studies

During 1929-30, studies were made of all the Negro schools in fifteen counties. Each study included information regarding classification of enrollment, provision for drinking water and toilet facilities, amount and kind of furniture, library and other teaching equipment, qualifications and salaries of teachers, and a picture of each building. All the schools in each county were indicated by dot and name on a county map. A picture of the building, summary of conditions in each school and recommendations regarding each school were sent to the fifteen superintendents of their respective counties. It is gratifying to learn that some of the recommendations are being put into effect. Hillsborough, DeSoto, Charlotte, Sarasota, Marion, Madison, Alachua, Baker, Washington, Holmes, Walton, Okaloosa, Santa Rosa, Hernando, and Escambia counties were studied. The following is an illustration of the findings in the counties studied.

MARION COUNTY NEGRO SCHOOLS

1928-29—1929-30 Reports

1 school with	764 pupils enrolled had a term of 160 days.
21 schools with	1,524 pupils enrolled had a term of 120 days.
8 schools with	475 pupils enrolled had a term of 100 days.
15 schools with	797 pupils enrolled had a term of 80 days.
7 schools with	137 pupils enrolled had a term of 60 days.
1 school with No term
53	3,697

In 1926-27 the Negro school population of Marion County was estimated to be 4,680. Therefore approximately 1,000 children of school age were not enrolled in 1928-29. The average school term was 124 days.

CLASSIFICATION OF PUPILS

	Boys	Girls	Both
Chart Class	527	485	1,012
First Grade	280	264	544
Second Grade	237	246	483
Third Grade	224	219	443
Fourth Grade	143	210	353
Fifth Grade	133	184	317
Sixth Grade	77	172	249
Seventh Grade	47	79	126
Eighth Grade	21	42	63
Ninth Grade	18	21	39
Tenth Grade	11	13	24
Eleventh Grade	2	20	22
Twelfth Grade	6	16	22
Total	1,726	1,971	3,697

One hundred one teachers held certificates as follows:

None	4	Second Grade....	36	Special	3
Temporary	4	First Grade	1	Graduate State	7
Third Grade	40	Life First	1	Life Graduate State	4

Assessed valuation of all property in Marion County in 1929, \$10,952,820.00.

Total cost of Negro schools in Marion County in 1928-29, exclusive of administration, \$30,992.00.

1929-30

1 school with 737 pupils enrolled had a term of 160 days.
 1 school with 229 pupils enrolled had a term of 120 days.
 50 schools with 2,421 pupils enrolled had a term of 80 days.

3,387

Approximately 1,300 Negro children of school age in Marion County were not enrolled in school this year.

The classification of pupils for 1929-30 is not given because it is similar to the 1928-29 classification.

The classification of teachers' certificates is not given because it is similar to that of 1928-29, only a little worse.

Of the 52 Negro schools in Marion County the general conditions are as follows:

No. schools housed in good buildings	6
No. schools housed in poor buildings, lodges or churches	46
No. schools with no toilets, or with one inadequate	39
No. schools having 2 surface toilets	12
No. schools having water closets	1
No. schools with no water supply	41
No. schools with pumps	10
No. schools with city water supply	1

STANDARD ELEMENTARY SCHOOLS

The Booker Washington Elementary school in Miami, Williams Academy in Ft. Myers and the Stanton elementary school in Jacksonville maintained standardization requirements for elementary schools in 1929-30. There should be at least one standard elementary school in each county.

STANDARD HIGH SCHOOLS

Encouraging signs of progress in Negro education are evidenced by the increase of standard high schools in Florida. This means that more children are continuing to go to school and that better educational facilities are being provided for Negro children.

The Washington High School, Pensacola; Lincoln High School, Tallahassee; Stanton High School, Jacksonville; Lincoln Park Academy, Fort Pierce; Lincoln High School, Gainesville; Howard Academy, Ocala; Central Academy, Palatka; Daytona Beach Negro High, Daytona Beach; Dunbar High School, Fort Myers; Booker Washington High School, Miami; Washington Park Academy, Lakeland; Florida Agricultural and Mechanical College Demonstration School, Tallahassee, and Industrial High School, West Palm Beach, were accredited standard senior high schools during the biennium 1928-30. The high school departments of Edward Waters College, Jacksonville; Bethune-Cookman College, Daytona Beach, and Florida Normal & Industrial Institute, St. Augustine, were also accredited.

The Negro high schools in St. Augustine, Hastings, Bartow, St. Petersburg, Orlando, Fernandina, Key West, Tampa, Quincy and Lake City should become standardized soon. Eventually there should be at least one accredited Negro high school in every county where the Negro population is large enough to support it.

TEACHER-TRAINING DEPARTMENTS

The privilege of establishing Teacher-Training departments with state aid is sufficient justification for the standardizing of Negro high schools. During the biennium 1928-30, Teacher-Training classes were taught in the Pensacola, Tallahassee, Gainesville, Ocala, Daytona Beach, Fort Pierce and Fort Myers Negro high schools.

The enrollment in the Teacher-Training classes taught in five of these high schools in 1928-29 was 102 students and 114 students in the seven high schools in 1929-30. Qualified and certificated Negro teachers are needed in this State. The supply is very limited. This manner of training and certificating Negro teachers seems best adapted to meet the conditions at present.

It is recommended that the State aid for these classes be continued and that similar classes be taught in all accredited Negro high schools.

HOME ECONOMICS ACTIVITIES FOR 1929-30

The number of Home Economics departments increased from 17 to 21. The number of teachers increased from 21 to 28. Nineteen schools were visited by the State Supervisor of Home Economics. The supervisor became acquainted with the teacher and program, observed the teaching, and made recommendations for improving the work. The State Supervisor met with the teachers during the State Educational Meeting and helped plan for the organizing of a State Home Economics Teachers Association.

It is recommended that:

1. Home Economics be taught in all schools employing four or more teachers. Some essentials in home making be taught the larger girls in all the smaller schools.

2. The State course of study, parts of which are not applicable to the present conditions in the Negro schools, be adapted to the need of the girls in their daily home life and environment.

3. Vocational Home Economics be developed in the Negro schools.

4. Home projects, accompany the Home Economics taught in school.

5. Part time Vocational Home Economics and sewing classes be taught employed girls and women.

VOCATIONAL AGRICULTURAL EDUCATION

The program of Vocational Agricultural Education is two-fold in purpose:

1. To train boys for the business of farming.
2. To train the adults, already engaged in farming, along specific lines that will enable them to more efficiently carry on their work.

The teacher of Vocational Agriculture in addition to his classroom teaching, supervises the practice farming or project work of each pupil, and helps to solve the agricultural problems of the community.

The enrollment in all day, day unit, part time, and evening adult classes for the fiscal year 1928-29 totaled 347 pupils.

The total enrollment for the fiscal year 1929-30 was 600 pupils, showing an increase of 253 pupils over the past fiscal year.

Under the supervision of the teacher of vocational agriculture, these pupils carried projects on their home farms in almost every conceivable field of agriculture in the State, including field crops, truck crops, citrus, live stock and poultry.

The pupils' labor income from these projects totaled \$25,535.16 for the fiscal year 1927-28; and \$27,916.23 for the fiscal year 1928-29.

The following list shows the location of the various departments of vocational agriculture in the State during the past biennium:

1928-29

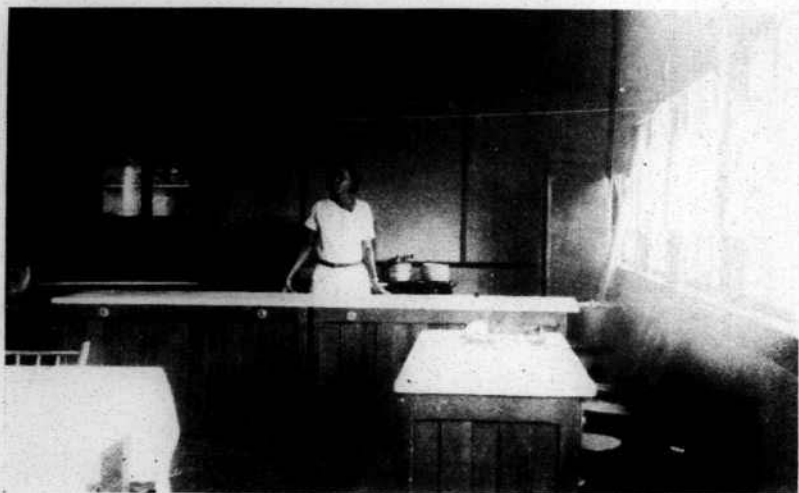

County	School
Alachua	Alachua
Dade	Coconut Grove-Goulds
Gadsden	Quincy
Jackson	Marianna
Lake	Leesburg
Leon	Florida A. and M.
Palm Beach	Delray

1929-30

County	School
Alachua	Alachua
Brevard	Melbourne
Columbia	Lake City
Dade	Goulds

Teaching Hand Sewing in the Palm Beach County Training School at Delray.

The Home Economics Department of the Dade County Training School at Coconut Grove.

1929-30

Jackson	Marianna
Lake	Eustis
Lake	Leesburg
Leon	Florida A. & M.
Palm Beach	Delray
Putnam	Crescent City
St. Johns	Hastings

TRADE AND INDUSTRIAL EDUCATION FOR NEGROES

During the biennium continued effort has been directed to an increase of our training of Negro boys who are later to enter some one of the many trades at which they may successfully work. Many of these boys find themselves happily and profitably placed in this type of training.

The trades at which Negro men work are easily discerned through everyday observation. They include automotive trades, tailoring, printing, the trowel trades (masonry, cement and plastering), the wood-working trades, as carpentry and millwork, and others.

The logical objective of any trade training scheme for Negroes is to train the boys so that they may work with the greatest efficiency and satisfaction to themselves and society at the levels in the trades to which they may rise.

Through cooperation with the State Department for Vocational Education a general course in building trades, as it finds application in the construction of Negro homes, has been conducted in Florence Villa, Polk County, and in Eustis, Lake County. Some homes built by the class of boys at Florence Villa are shown on the page opposite.

A strong course of training for younger men in brick-laying has been given in connection with the Florida A. & M. College. This, and the courses mentioned above, have been supported in part from Federal and State funds appropriated for trade training under the Smith-Hughes Act.

Other forms of industrial training, such as Manual Arts, are carried on in the larger cities of the State. Also a number of trade courses are given at the Florida A. & M. College which have not qualified for reimbursement from vocational funds.

The following table shows the extent of trade training during the biennium:

1928-1929				
CITY	TRADE	No. of Pupils	No. of Teachers	Reimbursement State & Federal
Tallahassee (Fla.				
A. & M. College)	Bricklaying	13	1	\$ 630.00
Florence Villa	Carpentry	16	1	567.50
Eustis	Carpentry	24	1	600.00
		—	—	—
Totals		53	3	\$1,792.50
1929-1930

DEPARTMENT OF PUBLIC INSTRUCTION

**THE FLORIDA AGRICULTURAL AND MECHANICAL
COLLEGE**

The Florida Agricultural and Mechanical College does four years' work of the college level in the departments Arts and Sciences, Education, Agriculture, and Industrial Arts. This institution trains the teachers for the Florida Negro high schools and elementary schools and with the exception of colleges in other states this institution is the state's only source of trained teachers. Private Negro institutions in the state have for years enrolled students, conducted school, and graduated students without state direction or recognition. Three of these private institutions have made an initial step in progress by conducting their high school departments in accordance with the regulations of the state department of public instruction. These institutions have been visited, studied and advised by the University of Florida Committee on College Rating and the State Agent. The presidents of these institutions have been advised to organize their institutions as junior colleges patterned after the first two years' work done in the Florida Agricultural and Mechanical College. Complete differentiation between the high school and junior college has been recommended in the classification of students and faculty, use of buildings and equipment, and administration. Four curricula offering two years of college work in Home Economics, Commercial Training, Teacher-Training, and Pre-professional Training have been recommended to be taught. Definite lists of supplementary books for each course to be taught; name, kind, and quality of each type of equipment and material needed in the science courses to be taught; and scholastic qualifications for the teachers to be employed are the kind of recommendations made to these institutions. If these institutions should be conducted according to the recommendations submitted, they should do creditable work and with state supervision their activities should fit into the state program for training teachers.

CHAPTER VI

Physical and Health Education

I. Summary of Activities.

A. Visits and Conferences:

1. Athletic Directors—4.
2. Colleges and Universities—18.
3. County Board or County Board Members—18.
4. County Superintendents—90.
5. County Supervisors—47.
6. Deans—16.
7. Doctors—18.
8. Extension Workers—4.
9. Nurses—56.
10. Physical Education Supervisors—8.
11. Physical Education Teachers—115.
12. Principals—123.
13. Public Health Workers—10.
14. Recreation Directors—6.
15. Schools—183.
16. School Architects—3.
17. Welfare Workers—5.

B. Meetings Attended, and Addresses Delivered:

1. Athletic Association—2. Addresses—2.
2. County Teachers—5. Addresses—5.
3. District Physical Education Meeting—3. Addresses—3.
4. Faculty Meetings—14. Addresses—14.
5. Florida Education Association—2. Addresses—3.
6. Florida Education Association District Meetings—19. Addresses—20.
7. Florida Health Council—4. Addresses—2.
8. Florida Medical Society—1. Addresses—1.
9. Florida Physical and Health Education Society—2. Addresses—2.
10. Negro Education Association—4. Addresses—4.
11. Principals Conference—2. Addresses—2.
12. Public Health Workers—2. Addresses—2.
13. Recreation Congress for Southeastern States—1. Addresses—1.

Negro Homes Built by the Carpentry Class at Florence Villa.

14. Social Workers Conference—1. Addresses—1.
 15. State Conference of Social Work—2.
 16. Vocational Agriculture Teachers—1. Addresses—1.
 17. Student Assemblies—5. Addresses—5.
- C. Conferences with Organization Heads:
1. Federation of Women's Clubs—3.
 2. Florida Branch of the National Congress of Parents and Teachers—5.
 3. Florida Dental Society—2.
 4. Florida High School Athletic Association—2.
 5. Florida Medical Society—4.
 6. Florida Public Health Association—10.
 7. State Board of Health—12.
 8. University and Colleges—4.
- D. Attendance at Out-of-State Meetings:
- College Directors of Physical Education—1.
- National Intercol. Athletic Association—1.
- National Amateur Athletic Federation—Women's Division—1.
- Society of State Directors of Physical and Health Education—2.
- American Physical Education Council—2.
- (The above meetings were all attended on two out-of-state trips.)
- National Education Association—1.
- Southern Physical Education Association—2. Addresses—1.
- E. Miscellaneous Meetings and Conferences:
- District Athletic Meets—2.
- Schools Visited for Standardization Inspection—18.
- County Field Day Official—2.
- Health Education Classes Addressed—15.
- Play Days Promoted—9.
- Curriculum Revision Steering Committee—2.
- Physical Education Major Students—2. Addresses—2.
- Other Meetings Attended—15.
- Course of Study Committee Meetings—8.
- Total Addresses—47.
- County Schoolmasters Club—1.
- F. Activities in National and State Organizations:
- President, Florida Health Council.

Chairman, Physical and Health Education Curriculum Revision Program.

Chairman, Parent-Teachers Association, State Physical Education Committee.

Member of State Council Social Hygiene.

Member American Physical Education Association, Committee on Aims and Objectives.

Chairman of Committee of Education and Training for State Conference on Child Health and Protection.

G. Material Prepared and Distributed:

Blue Ribbon Standard and certificate.

Standard of grading school programs for college credit in Physical Education.

Revised score card for school and county programs.

Physical and health education news letter.

List of books in physical and health education for high schools.

List of books in physical and health education for elementary schools.

List of athletic kits for elementary and high schools.

Publication lists of organizations furnishing free and inexpensive material on physical and health education.

Weight charts for classrooms.

H. The following speakers of national reputation were secured for several meetings within the State:

Dr. Jesse F. Williams of Columbia University, who made a survey of physical and health education as a part of the state educational survey. He also addressed some district education association meetings.

Mr. James Edward Rogers, President of the School Health and Physical Education Department of the National Education Association and Director of the National Physical Education Service of New York City, was secured for two trips to Florida, at which times he addressed several groups in various sections of the State.

Dr. H. E. Barnard, Director of White House Conference on Child Health and Protection, made one visit and addressed several groups within the State.

Mrs. Walter McNabb Miller of American Child Health Association visited the State and made addresses before several groups; also assisted in forming a State Council to transmit the findings of the White House Conference on Child Health and Protection to the people of Florida.

II. The Physical and Health Education Score Card.

The following table will show the trend and the use of the score card from 1925 to the present time. This card is being gradually accepted without being required of principals and superintendents. For this biennium the score card was completely revised, provision being made for separate cards for elementary and high schools. Increased effort was made to get superintendents to use this card to measure progress on the basis of a county-wide physical and health education program. The increase from three counties in 1926 scoring all schools, to thirteen counties scoring all elementary, and nine scoring all high schools for the years '29 and '30, is very gratifying.

It was the aim of producing this score card, to provide a suggested program for the school principals and to furnish a means whereby they could measure their progress at the end of the school year.

Use of Score Card for the County Program

	School Year 1926-27	School Year 1927-28	School Year 1928-29	School Year 1929-30
No. Schools Scoring	257	225	370	600
Highest Score by County -	Orange	Seminole	H. S.—Volusia E. S.—Volusia	Orange St. Lucie
No Counties Scoring All Schools	3	7	H. S.—6 E. S.—7	13 9

III. The Blue Ribbon Program.

The Blue Ribbon Program has been gradually accepted in a large number of counties over the State. This program was first tried out in two counties. It was revised and presented to other counties that were regarded as able to carry on this work. Over thirty counties are now doing some work with the Blue Ribbon program.

The objectives of this program are:

- a. To close the gap between the number of children found with defects and the number of children who have had defects corrected. Survey of several counties show that from sixty-five to seventy percent of the children suffer from some type of defect. The score card from some of our best counties show that only twenty-five per cent of these defects are being corrected.
- b. To interest the parent, teacher and child in the correction of defects through the use of the score card. We hope to get interest aroused as to standard of physical excellence. We find that parent, teacher and child have been aroused by the use of this score card. A large number of certificates have been awarded to children who have been able to make one hundred of the one hundred and twenty points listed on the score card.

IV. Teacher Training.

a. The classroom Teacher.

Provision for training of teachers will probably have more effect on the success of the physical and health education program than any other one item. Provision has been made for training of classroom teachers. Courses are being offered at the University of Florida and Florida State College for Women, during summer school and regular sessions which will give the teachers six semester hours work in physical and health education. This type of training is being taken advantage of by a large number of teachers.

Extension classes for these same courses have shown the largest enrollment. Classes have been offered in a large number of counties. Duval, Suwannee, Hillsborough, Pinellas, Gadsden, Manatee and Baker are the counties in which several classes have been taught.

Other colleges in the State are making plans also to offer similar courses.

b. The Special Physical and Health Education Teacher.

For the training of the physical and health education major, courses have been organized at Flor-

ida State College for Women and the University of Florida. In both institutions the major totals between thirty-six and forty semester hours in physical and health education. A regular B. S. degree in education with a major in physical and health education is being given on the completion of four years of work. Approximately forty students have been enrolled in the University of Florida and sixty at the Florida State College for Women. Plans are under way at both institutions to provide for a minor of eighteen semester hours so that teachers will be provided for the smaller high schools.

A teacher trainer has been provided for this work at the University of Florida, as a member of the staff of the College of Education. He has the assistance of the physical education teachers and the athletic staff. The staff of the Florida State College for Women is composed of eight teachers who give their full time to physical education. A physical education plant has been provided at the Florida State College for Women that is comparable to any physical education building in the South. The State has yet made no provision for this type of building at the University.

V. Reference Material for Teachers.

Progress of the physical and health education program is shown by the increase in the use of books on physical and health education. In a large number of counties, superintendents have supplied books in their county and have placed in their professional library lists of books recommended by the State Supervisor of Physical and Health Education. Principals and superintendents over the State have been furnished with recommended lists of books and given advice as to the books most suitable for their situation. Progress in the use of books has been facilitated by recent production of excellent material by several leading publishers.

Texts were adopted by the Text Book Commission for health education in the high school. These books are to be used in grades nine to twelve. This is definite progress in the instruction given to high school students.

VI. Physical Education Equipment and Supplies.

Facilities for physical education equipment and supplies are being accepted as a part of the school responsibility and plans are being made in several of the cities to provide a place in the budget for this material. The County Board of Education, Hillsborough County, approved thirty-three and one-third cents for every pupil for physical education supplies. This is in line with the National Education Association recommendation.

Arrangements have been made with some of the leading sporting goods manufacturers whereby athletic kits, composed of a wooden chest and physical education supplies, can be furnished to the elementary schools through their local sporting goods dealers. This material comes to the schools at wholesale price and makes it possible for these schools to provide material for the children at a very reasonable cost.

VII. Credit in Physical Education.

A. College Entrance Credit:

Another indication of recognition of physical education as a part of the educational program is shown by the acceptance by Entrance Credit Committee of the University of Florida of one unit of physical education. A plan was worked out by a committee whereby the high school program should be judged and approved by the State Supervisor of Physical and Health Education. Graduates of schools so approved may receive one unit of entrance credit to the University of Florida. Only one school was accredited in 1930.

Other states have followed the lead of Florida in working out standards for accrediting physical education.

B. Credit Toward Graduation from High School.

It has been the practice since 1926 to allow one unit of credit in physical education toward graduation from high school. Several schools have been approved for giving this credit. The plan is described in the standards for high schools prepared by the State Supervisor of High Schools, published by the State Department of Public Instruction.

VIII. The Florida Health Council and the White House Conference.

Much interest has been aroused through the efforts of the Florida Health Council. The State Supervisor served as President of this Council for two years. Definite effort has been made to tie this council closely to the work of the White House Conference on Child Health and Protection. The Director of the White House Conference, Dr. H. E. Barnard, was so interested in the Florida Council that he made a special trip to the State. The Governor has shown a keen interest in the work of the Council. It is planned that this Council will act as an open forum for distribution of material organized by the twelve hundred experts of the White House Conference. It is planned to organize county councils and carry this information to the people. It is the wish of the President of the United States that local and state organizations join hands in helping determine state and national policies on child health and protection. The report of this Conference will be given to the people following the meeting in November, 1930.

This council has done much in promoting an understanding between the three great groups working for social progress in Florida, namely, Welfare, Public Health and Education. The Council has also been instrumental in promoting an understanding between voluntary and professional organizations, state-wide in nature, that can contribute towards health, education and welfare.

IX. The Curriculum Revision Program.

The State Supervisor has assisted committees of teachers in a few counties to work out an elementary course of study in physical and health education. These courses of study have been used by the teachers in those counties with some degree of success. It was realized that there was a need for state effort to promote the program of physical and health education in all the schools.

The State Supervisor was appointed by the Steering Committee of the Curriculum Revision Program of Florida as Chairman of Physical and Health Education Curriculum Revision. He was given power to appoint a state committee. This state committee

has been appointed and production committees set up in different sections of the State.

District meetings have been held in various sections of the State and out-of-state speakers secured for addresses and round-table discussions. One meeting was attended by representatives from five counties. Definite work has been started on the revision of the elementary curriculum.

It is planned to produce the following series of bulletins or courses of study in physical and health education: Volume I, a program for grades one to three; Volume II, program for grades four to six; Volume III, a program for Junior high schools, and Volume IV, a program for Senior high schools. It may be necessary to produce a special bulletin for adapting the course of study for the one- or two-teacher school.

X. Cooperation with the State Board of Health.

It is very desirable that this department cooperate closely with the officials of the State Board of Health. We have many reasons to believe that a very cooperative feeling exists. A conference was held which was attended by the State Health Officer, the State Superintendent and officials of both of these organizations.

The State Board of Health has been furnishing plans for health examinations of school children and teachers. They also furnish material for immunization programs and treatment for hookworm cases.

The staff and district nurses and doctors have assisted, whenever their duties permitted, in the examination of the school children. The sanitary engineers have cooperated in the work of the school building and toilets.

XI. Coordination of Physical and Health Education as Part of the School Program.

Definite effort has been made to make physical and health education as an integral part of the school program. Many items on the standardization blanks for elementary and high school deal with this phase of the school program. Sincere effort is being made by both the State Supervisor of High Schools and the State Supervisor of Elementary Schools. This attitude has been of assistance in getting the work

properly integrated in the county systems. There is less inclination on the part of the county superintendents and principals to designate the entire health education program to school nurses.

Physical and health education should contribute its part towards the general aims and objectives of education. It should not be over-emphasized or neglected. The progress in this direction has been gratifying. Many of the county supervisors of elementary schools are considering the physical and health education program as a part of their duties.

XII. County Supervisors of Physical and Health Education.

During the past period, two county supervisors of physical and health education have been employed. This trend will doubtless increase rapidly within the next few years. It is in keeping with recommendations of the National Recreation Association and in line with progress in other states. Supervisors of this special field are necessary now because of the great lack of trained teachers for the high school and the inadequate preparation of the classroom teacher in the elementary schools. The county supervisors are doing great work in coordinating the efforts of the classroom teachers, the special physical education teacher, the school nurse and professional and voluntary organizations who can assist in this phase of the school program.

XIII. Recommendations.

The following recommendations deal with the improvement of the physical and health education state and county programs:

A. Training of Teachers.

1. Classroom teacher.

It is recommended that all classroom teachers not graduating before June, 1933, be required to have had three semester hours training in physical education, principles, practice and methods and three semester hours training in health education, principles and methods. This should be required of graduates of all schools in the State preparing for teachers.

Some plan should be worked out whereby teachers now in service would be required to take

some of this training in order to renew their certificates. Extension and summer school classes should be provided for training of teachers in service.

2. The Special Physical Education Teacher.

For teaching physical education in high schools, teachers trained with a major in physical and health education should be provided. In small schools where it is not possible to employ a full time physical education teacher, teachers should be provided with a major or minor in physical education and employed to give part of their time to physical education classes.

As soon as a reasonable number of teachers have been trained regular classes in physical education should be required in all high schools.

B. A more adequate plant is needed at the University of Florida.

If the student body and the physical education majors are to receive proper attention and training the physical education building similar to the one provided for the Florida State College for Women should be erected. This plant should be considered as a physical education building and a more definite program in physical education should be offered to the University students.

C. Health Education Texts for Elementary Grades.

Since the Text Book Commission adopted health education texts for the high school grades it is recommended that a similar provision will be made for the elementary grades when texts are adopted for these grades.

D. Health Examination of School Children.

Health examination of the school children in the State of Florida is, by law, under the supervision of the State Board of Health and the examination of the school children regarded as a part of the State Board of Health duties. In keeping with recommendations of the Survey Commission to the Legislature, the State Board of Health should not be responsible for these examinations. Local responsibility is needed. The county should provide for the examination of the school children by school physician or local doctors, school

nurses should also be provided so that no nurse has over two thousand school children under her supervision. It should be the main duty of the school nurse to assist the physician in the examination and make follow-up visits in order that correction of defects will be made. The school nurse can also render a valuable service in excluding and readmitting children to school who have had, or suspected to have, a communicable disease.

E. Health Examination of Teachers.

Provision should be made for requiring a health record of the prospective teachers accompany the record of academic work before a certificate is issued.

The County Superintendent should require a record of the annual examination of teachers before the latter are permitted to sign the annual contract. This requirement is no more strenuous than the requirement in many of our industrial plants. The health of the child is often endangered by a teacher not in proper health.

Since there are more nervous breakdowns in the teaching profession than in any other large group, definite effort should be made to give the best of health service to the teacher. They should not be overworked with classes. Rest rooms should be provided for their relaxation.

F. Coordination of Athletics with Other Phases of the School Program.

Athletics is being more and more regarded as a means of education of youth. Definite administrative effort should be made by principals and superintendents so that athletics as it exists in our schools, will do all to help and nothing to harm the boys and girls. Serious and constructive thought should be devoted to the solution of this problem. Athletics should not be regarded as an advertising medium for a school or a town. Instead it should be thought of as presenting opportunities whereby individuals can act in situations that are physically wholesome and mentally stimulating and satisfying, and socially sound.

G. County Supervisors of Physical and Health Education.

As rapidly as school progress and finances permit, County Supervisors of Physical and Health Education should be provided in all counties. This is in line with recommendations of the State Educational Survey Commission and the National Education Association. These supervisors can do much as helping teachers to make up for the lack of adequate training in physical and health education on the part of the classroom teacher. Such a supervisor can make very definite contribution in coordinating all organizations and agencies that they assist in the physical and health education program.

H. Budget for Physical Education Supplies.

Provision should be made in the county school budget for physical education supplies such as balls, bats, nets, etc. These supplies should be considered on the same basis as chalk, erasers, and laboratory supplies. This recommendation is in line with the recommendation of the National Education Association and the Florida Survey Commission.

It is estimated by Nash* that the amount budgeted per capita for the school child should vary from twenty cents per capita in the lower grades to sixty cents per capita in the high school grades. Some counties in the State have already placed this item in their budget.

* J. B. Nash—Organization and Administration of Playground and Recreation. A. S. Barnes & Co., New York City, N. Y.

CHAPTER VII

Trade and Industrial Education

To the purpose of assisting men and women, boys and girls who want to learn how to do a job, to improve their efficiency in their present job, to get a better job, or to believe in their job, the Trade and Industrial Division of the State Department for Vocational Education is devoting itself.

Trade and industrial fields continue to draw most of our working people. "We cannot in fairness continue to provide specialized education free to the few who propose to enter the professions, while denying education to the many for the commoner vocations." Education of the type that renders an industrial man or woman able to serve industry and society to the full extent of individual capacity is a public responsibility. It is paid for by the public through the cost of organized training to the end expressed, or doubly through the increased cost of inefficient production.

Industries of the type whose workers are in position to profit most from trade and industrial training are located in or near the larger cities of the State, consequently the work of this division of the Department for Vocational Education has taken place with little regard for geographical spread. Instead attention has been given to sections whose interest and background of industry promised the greatest efficiency in the use of funds set apart for training purposes.

There are few industrial organizations within the State requiring large groups of highly skilled workers. A private survey in a city within the State showed a ratio of skilled to unskilled workmen as 49 to 51. On the other hand, Florida is abundant in opportunity for those requiring skill in the "so-called" service trades, such as building trades, auto-mechanics, electrical, foods trades, nursing, etc.

At a director's conference in Gainesville April 3-5, 1930, fields of training such as: laundry, baking, nursing, barbering, radio, aviation, refrigeration, beauty culture, restaurant and hotel training, were discussed with reference to the need for training.

The state supervisor of trade training has discussed with leaders in the fields of beauty culture, nursing, laundry, baking, aviation, building trades, and with restaurant and hotel men, the probable needs for training in these fields. In practically everyone of these there was a favorable response to the idea of organizing training for workers. There is a striking need for additional service on the part of the State and local departments in the organization of instructional material and the training of instructors to handle the courses. Because of limited personnel in the State and local vocational departments training must necessarily be restricted.

The undeveloped fields indicate further promotional need of trade and industrial training throughout the State. All the difficulties can not be overcome, nor can the program go forward to meet all these needs at once. Improvements and an increase of supervisory and administrative facilities, both State and local, and increase in financial aid must be provided or we shall reap the result of slow progress.

The recent survey of the educational system of Florida contained in its recommendations the statement that we should not attempt to produce more mechanics but better ones. With this thought in the foreground during the biennium our effort has been directed to the organization of more evening classes among the tradesmen of the State. The purpose of these classes has been to extend the tradesman's knowledge of the "how and why" of practice in the trade.

In a few instances where day unit classes had already been established preparation of younger men to enter trades has gone forward. Also in one special case where industry expressed a definite need and desire for new men with training which would permit them to enter the trade as advanced learners and be an asset to the employer, the day unit class has been established.

Florida has experienced during this biennium an increased demand for some organized plan of training its juvenile workers. Greater numbers of boys and girls, 14 to 16 years of age and over, have had to forego the opportunities offered in the regular schools for work at some wage-earning occupation. Causes, ranging from necessary support of the family of a widowed mother to failure to find profit and happiness in the pursuit of the traditional

studies offered in the secondary schools, have been stated as reasons for our juvenile workers dropping out of school.

The State requires that where a city has 15 or more workers from 14 to 16 years of age they must provide a part-time training opportunity for them at public expense. It is further required that this training shall take place during the working hours of the day. This is the State's method of applying a democratic principle to matters of education for the youth of Florida, an expression of the belief in equal educational opportunity regardless of financial or social status of the individual.

Our part-time schools accommodate not only the 14- to 16-year-old juvenile workers, but also other workers who can reap civic or vocational benefit from training of less than college grade.

During the biennium there has been an increase in voluntary attendance upon the part of workers. Special training has been given in fundamental subjects, commercial subjects, social and job adjustment problems, home making, trade subjects and special job training according to the needs of the individuals applying. All training is without regard for a grade, the primary purpose being to develop working ability and desirable social attitudes with the least expenditure of time, effort and money.

In some instances there has been a demand on the part of juvenile workers for definite training for a trade. The matter of employment has deprived this group of full-time study and practice in preparation for a selected trade, therefore, the department has, under the provision of the State Plan, established part-time trade preparatory courses for this class of juvenile workers. The time engaged in this training has varied from one to four hours per day per individual.

With the exception of the part-time continuation school the major enrolment in trade and industrial training has been composed of boys and men. Similar opportunity and plans adjustable to working conditions are available for girls and women who are to enter occupations requiring manual and related technical skills. Opportunities are pronounced in the fields of nursing, beauty culture, the foods trades, etc.

The principal developments for the biennium are given in the following statements:

Service Station Management

The Standard Oil Company of Kentucky, in cooperation with the State Department for Vocational Education and the local departments of the city of Tampa and Jacksonville entered a program of training their service station managers.

It was not pre-determined what this training should be, therefore, a brief analysis of the manager's job was made. From this, definite procedures and materials were worked out for an extension of this work. In summary, the development in this field has resulted in the vocational departments mentioned assisting the Standard Oil Company to work out these procedures and materials so that the latter might in turn be adopted for use by the company which proposes to handle its own training scheme in the future.

Railway Shops

In addition to continuing the work with the railroad shopmen reported the preceding biennium, the Seaboard Air Line Railway Company at Jacksonville did some preliminary work on a vocational training scheme for their men. One foreman conference was held with the car-repair foremen. This conference was followed by the organization of some trade extension classes for the workers in the shops at Jacksonville.

Refrigeration

Training for iceplant operators and workers in refrigeration plants has been initiated during the biennium. Two cities have participated in this training with one group each in Miami and West Palm Beach. These courses were established on direct request from the owners and operators of plants in these cities and much good has been accomplished by the training.

Aviation

Two fine groups of employees of the Naval Air Station at Pensacola, Florida, requested training in airmotor mechanics and the theory of airplane construction. Through the cooperation of these individuals, the officials at the Naval Air Station, Escambia County Board of Public Instruction and the State Department for Vocational

Education, these courses were organized and have gone forward with splendid results. Through further cooperation with the United States Department of Aeronautics equipment in the form of three engines, a complete plane and other necessary parts were secured to aid these classes in their work. In addition to having cooperation of the types mentioned above, well-trained instructors were available from the Naval Air Station. Preliminary plans have been made during the biennium for an extension of this service in the cities of Miami and Tampa.

The Building Trades

Labor organizations have awakened to the possibilities of trade extension work for their craftsmen. As a result some new courses and an extension of the usual ones have been developed. A representative of the State Department met with the State Carpenters Union at Lakeland in February of this year and as a result of this meeting four extension groups have been organized for training in places where training had not been given. The number of groups is of little consequence compared with the general development that has taken place in labor's thinking on the topic of vocational training for laboring men. This thinking has spread from the carpenters to other groups and a general endorsement of vocational education and cooperation in the organization of trade classes of the State is rapidly approaching.

Radio

Plans have gone forward during the latter part of the period for the organization of trade extension courses in radio service. Jacksonville, Pensacola, Tampa and Miami have made definite plans to initiate further training in this field. Tampa and Pensacola have already had successful courses under way for more than a year.

Boat Building

Upon a definite request from the boat building industries of Miami a day trade program has been set up for the specific purpose of training young men in the boat carpenter's trade. Practical work on boat construction has been provided for this class. An exceptional group of young men have enrolled in this training and as the bi-

ennium closes we find many of them in the industry as ranking advanced learners.

Other Courses

Several other new courses have been developed. Among them are lathing, vulcanizing, wood graining and interior decorating.

The trade and industrial division of the department has been under the direction of one supervisor connected with the State Department for Vocational Education, and local supervisors or directors in the following cities. Pensacola, Jacksonville, Orlando, Tampa, St. Petersburg, Miami and West Palm Beach. In addition to the above cities, which have employed persons to supervise and direct the work of the instructors, Sanford, Punta Gorda, Tallahassee, Lake Wales, High Springs, Hollywood, Ft. Lauderdale, Florence Villa, Eustis, and Florida A. & M. College at Tallahassee have conducted work of one or more types under the direct supervision of the State department.

The State supervisor has devoted an equitable share of his time in the field to promotion, inspection, supervision of courses in progress, and to the training of teachers on the job. As to division of time between the work in the office of the department on reports, research, correspondence, etc., and field work the ratio is about 50-50.

Three outstanding needs present themselves at the close of the biennium:

1. Assistance in the state department in teacher-training and supervision.
2. Some financial arrangement by which an already depleted public school fund will not have to be relied upon for appropriations to continue and develop vocational education.
3. More adequate provision for professional improvement of vocational directors, supervisors and instructors on the working job.

A detailed statement of places where work has been conducted, the type of training given, the number of persons enrolled, the number of teachers employed, and the federal and state reimbursement to these courses is given below. Following these tables is a summary statement of the same.

CHAPTER VIII

Agricultural Education

VOCATIONAL AGRICULTURAL EDUCATION, 1928-1930

The program of Vocational Agricultural Education is twofold in purpose:

1. To train boys for the business of farming.
2. To train those already engaged in farming along specific lines that will enable them to more efficiently carry on their work.

The need for special training for the business of farming is emphasized by Professor G. A. Schmidt, Colorado Agricultural College, who writes:

"Unless our farm boys of today acquire some systematic instruction for farming, our next generation of farmers will not be much better off than are our present farmers. Any farm boy who intends to make farming his life work needs training just as does the boy who intends to become a lawyer, a doctor or an engineer. Any man attempting today, without training, the practice of law, medicine or engineering would be immediately recognized as a menace and an absurdity. A man attempting farming without training is a closer parallel to the untrained professional man than many people would think."

That the people of Florida who are interested in farming recognize the need and value of training in agriculture is manifest by the steadily increasing enrollments in vocational agriculture classes. During the fiscal year 1927-28 the total enrollment in vocational agricultural classes was 1,750 pupils; in 1928-29, 1,867 pupils, and in 1929-30, 1,921 pupils.

According to statistics compiled by Robt. D. Maltby, Federal Agent for Agricultural Education, the Vocational Agricultural Education program in Florida reached, during the fiscal years 1927-28 and 1928-29,* through all-day or day-unit classes, a higher percentage of all farm boys (between the ages of 14 to 20) than did the same

* Statistics on this item for the fiscal year 1929-30 are not yet available.

program in any other state in the South. This statement is significant in that it shows the extent to which Florida, in comparison with other Southern States, is filling this need for the training of the farm youth in the "business of farming."

Herbert Hoover says: "We in this country believe that education pays for itself and is worthwhile, and if this is true of any sort of education it is certainly true of vocational education—that it pays for itself. That is the acid test, particularly of vocational education—that it shall pay for itself. If it does not, it is not vocational education at all."

Applying this test to our program, we find that all pupils enrolled in vocational agriculture classes are required in addition to their regular classroom work to carry out at least six months of supervised practice work. This supervised practice or project work is generally done on the pupil's home farm, under the supervision of the teacher of vocational agriculture.

During the biennium the pupils enrolled in the vocational agriculture classes have carried their supervised practice or project work in almost every conceivable field of agriculture in the State, including citrus, field crops, truck crops, floriculture, bulbs, ornamentals, dairy cattle, beef cattle, hogs, poultry and bees.

The total labor income from this project work was more than the total cost of the salaries of all the vocational agriculture teachers in the State, for the same period of time. The following data bear out the statement that vocational agricultural education in Florida is paying for itself.

The total amount of local, State and Federal funds expended in payment of teachers salaries amounted to \$122,239.19 during the fiscal year 1927-28. During the same fiscal year the total labor income from the pupils supervised practice program amounted to \$132,797.98. This shows a return of one dollar and eight cents for each dollar expended. During the fiscal year 1928-29 there was \$123,292.51 expended for teachers salaries and \$159,725.47 returned in pupils project labor income from their supervised practice program. This shows a return of one dollar and twenty-nine cents from supervised practice work, carried on under the supervision of the agriculture teacher, for each dollar invested in teachers' salaries.*

* Statistics for 1929-30 not yet available.

Similar data from states all over the Union are responsible for the passage in 1929 of the George-Reed Bill appropriating additional funds to be distributed to the individual states for the further promotion of Vocational Education in Home Economics and Agriculture.

On August 1, 1929, the State Board for Vocational Education saw fit to add the full-time services of an additional man to the Supervisory Staff in Agricultural education. This action by the State Board has been more than justified in increased efficiency in the development of the vocational agricultural education program.

The demand for establishing new departments is increasing. Many counties in which departments are already established have asked for additional departments. The consolidation of more rural schools should make the demand still greater.

The teachers of vocational agriculture are employed for twelve months in the year. Besides his classroom teaching, the agricultural teachers supervises the practice work of each pupil and helps in trying to solve the agricultural problems of the community. He is required to be a graduate from a standard agricultural college. This places the services of a well trained man in every community where vocational agriculture is taught.

The teacher-training work for whites is carried on at the University of Florida, under Dr. E. W. Garriss as teacher-trainer. For negroes, this work is carried on at the Florida A. and M. College, with L. A. Marshall as teacher-trainer.

In both of these teacher-training institutions the "seniors" or "trainees" do their practice teaching in regularly established high school departments of Vocational Agriculture under a regular teacher of Vocational Agriculture.

The "practice teaching" in connection with teacher-training in Agricultural Education at the University of Florida is carried on at the Alachua High School located fifteen miles from the University, in a typical rural community.

The following resume of the work done and the things accomplished by George W. Dansby, teacher in charge of the Vocational Agriculture Department at Alachua, will give one a very clear conception of the type of training with which these future teachers of vocational agri-

culture were able to familiarize themselves during the fiscal year 1929-30:

"Two all-day classes were taught each day. Twenty-one boys were in this type of class.

A unit day class at LaCrosse was taught once per week during the school term. Ten boys were in this class.

In the fall of 1929, an evening adult class of fifteen farmers was carried on through a series of ten lessons on production and marketing of eggplants.

In the spring of 1930 an evening Adult and a part-time class was carried on, with twenty farmers and twelve boys, respectively, attending these classes.

In organized instruction the Agricultural Department has reached seventy-eight boys and farmers this year. These individuals have carried on home projects under the supervision of the agricultural teacher as follows: Sweet corn, 51 acres, cucumbers, 17 acres, peppers, 5 acres, Irish potatoes, 22 acres, watermelons, 20 acres, string beans, 6 acres, sweet potatoes, 1 acre, tobacco, 6 acres, eggplant, 138 acres, okra, 2 acres, breeding hogs, 5 sows, and dairying, 17 cows. This makes a total of 291 acres of crops besides the projects in farm animals. All were supervised by the vocational agricultural teacher.

One of the biggest problems in the Alachua community is the marketing of vegetables.

During the fiscal year the agricultural teacher assisted the farmers in marketing eight cars of eggplant, twenty-five cars of beans and cucumbers and fourteen cars of watermelons.

One of the agricultural boys who had a project in watermelons loaded and packed a car of melons, shipped it to Miami and went to Miami himself and in cooperation with the Agricultural Department at Lemon City sold this car of melons to good advantage in competition with thirty-five other cars of melons which were there. This car netted more to this boy than any other car from Alachua during the same week. (This is a good example of cooperation between two agriculture departments.)

The Vocational Agricultural department has treated over 2,000 pounds of watermelon, cucumber, eggplant and bean seed for farmers, bought 500 pounds of cucumber seed at a saving of from 25 to 35 cents per pound to the farmers, mixed one thousand pounds of tobacco dust for dusting watermelons at the savings of three cents per

pound, bought 60 pounds of eggplant seed cooperatively, and supervised sowing these in beds.

There is an active organization of farm boys carrying on in the school as a local chapter of the Florida Association, Future Farmers of America. These boys took part in the state contests sponsored by the Chilean Nitrate of Soda Educational Bureau and the Florida Forest Service. The Agricultural Teacher and the boys also participated in the State Fairs at Tampa and Jacksonville.

Beautification work was done on the school grounds at LaCrosse by the boys enrolled in the day-unit class. This work was done under the supervision of the teacher of vocational agriculture.

The department influenced and helped to obtain the services of a graduate veterinarian as meat inspector and practitioner. Arrangement was made for a carload of eggplant crates to be delivered to Alachua for use by eggplant growers. The department also obtained a copy of the Blue Book, a commercial rating index, for the accommodation of the truck growers.

In order to keep up-to-date in his profession, Mr. Dansby, agricultural teacher at Alachua, attended all district and State conferences for vocational agricultural teachers called by the Supervisor and the meeting of the Florida Education Association.

Mr. Dansby is a member of the following professional associations: Florida Agricultural Teachers Association; Florida Vocational Association; American Vocational Association; and the Florida Education Association. He is president of the Florida Agricultural Teachers Association and chairman of the Vocational Agricultural Teachers section of the Florida Education Association.

In order to further improve himself professionally, Mr. Dansby attended a class at the University of Florida once every two weeks and finished his graduate work. He received the degree of Master of Arts in Education, in June, and was elected to membership in the honorary society Phi Kappa Phi.

The Agriculture Teacher worked in cooperation with the teacher-training department of the University of Florida in training the ten seniors as teachers of Vocational Agriculture. These men visited the Alachua department twice a week throughout the college year.

In cooperation with the State Plant Board, he issued permits for shipment of all eggplants grown last fall in the Alachua community.

In carrying out his program of work in his community, Mr. Dansby wrote thirty-one agricultural news articles, made 442 individual service calls to farmers, and 240 visits to projects. He traveled 8,450 miles on official business during the year."

The preceding descriptive summary of Mr. Dansby's work as teacher of vocational agriculture at Alachua during the fiscal year 1929-30, is typical of the duties and activities of the vocational agriculture teachers throughout the State.

One of the most important developments in the field of Vocational Agricultural Education in Florida during this biennium has been the development of the boys organization, "Future Farmers of Florida."

This organization is made up solely of boys enrolled in Vocational Agriculture classes.

The State charter was granted September 17, 1928. The purposes of the organization as outlined in the constitution are:

1. To promote Vocational Agriculture in High Schools of Florida.
2. To create more interest in intelligent agricultural pursuits in the various counties of the State.
3. To create and nurture a love of country life.
4. To provide recreation and educational entertainment for students in vocational agriculture through state agricultural and athletic contests, vacation tours, father and son banquets, and the like.
5. To promote thrift.
6. To afford a medium for cooperative marketing and buying.
7. To establish the confidence of the farm boy in himself and his work.
8. To promote scholarship and rural leadership.

With these objectives set up and with an active chapter in each department of Vocational Agriculture striving to meet these objectives, it is readily understood what a vital part the Future Farmer organization actually plays in the success of Vocational Agriculture in the high schools of the State.

On October 7, 1929, the State organization of Future Farmers affiliated with the national organization, "Future Farmers of America."

Gray Miley, the president of the Future Farmers of Florida, was elected vice president of the Future Farmers of America. Gray was given this honor at the National Congress of Vocational Agriculture Students which was held in Kansas City, Missouri, November 18-19-20, 1929.

With the cooperation of the State Department of Agriculture, we were able to publish a very pretentious bulletin on Vocational Education in Florida. This bulletin, "Vocational Agriculture in Florida," was published as a quarterly bulletin of the Department of Agriculture; Volume 40, Number 2, April, 1930. It is available for free distribution upon request and anyone who is not thoroughly conversant with what is being done along the line of Vocational Agricultural Education in Florida should secure a copy.

Florida is primarily an agricultural state and there are great opportunities for improvement and progress along agricultural lines in Florida. It is a recognized fact that in the near future only the intelligent, well trained and efficient farmers will be able to succeed at the business of farming. Thus it becomes the function of the departments of Vocational Agriculture in the high schools of the State to train our "Future Farmers."

CHAPTER IX.

Home Economics Education

The home economics education program of the State Department of Education in Florida includes courses in the day schools, part time classes for employed girls, and evening school classes for adults.

Type Programs

1. Day School Program—

One unit in home economics, the equivalent of five sixty-minute periods per week for two semesters is required as a unit credit toward graduation from an accredited high school. Many schools offer more than one year home economics and many offer it in both Junior and Senior high schools. Florida has made a forward step in requiring home economics as part of the general education of every girl, for this is in keeping with the trend "some home economics for more girls rather than more home economics for some girls," as formerly.

The objective in home economics education is to help the girl to perform better the worthwhile duties that fall to her lot and to better assume the responsibilities she has, or should have, in her home and in the family group, and to develop the girl in acquiring managerial ability in attacking home problems as they are affected by the changing social and economics conditions. The aim is to accomplish this by offering the following topics for study by discussion, observation, demonstration, and laboratory and home practice, under the direction of a well qualified teacher: Food and Nutrition, Home Management, The Home and Its Furnishings, Child Care and Welfare, Family and Community Relationships, Personal and Home Hygiene, Textiles and Clothing.

2. Day School Vocational Program—

This is a two-year program with half of the school day devoted to home economics and related subjects (science and art) and home project work under supervision of the teacher. This makes possible a more effective program. The vocational schools receive State and Federal aid to

the amount of \$500.00 (\$250.00 State and \$250.00 Federal) on the vocational home economics teacher's salary.

3. Part Time Vocational Program—

The objective in home economics education is the same in the part time program as in the day school program but part time classes, as the terminology designates, are arranged to fit into the time the girl can take while on the job—for training in home making and home living. One hundred and forty-four hours annually is required for part time classes under the Smith-Hughes policy and less under the George-Reed policy.

4. Adult Vocational Education, Termed Evening School Program—

This is a program of classes in home economics for women over sixteen years of age. Classes are held in the forenoon, afternoon or evening, the time most convenient to the group. Short units of six to eight weeks, meeting twice a week for two hours each meeting, are most satisfactory. These units are practically the same as for day and part time girls but the method of presentation is adapted to the problems of the home maker. The aim is to help women with their problems in the home.

Housing of Departments

To attain the objective in home economics education it is desirable to carry on the work in quarters that nearly approach a home situation, which better lends itself to teaching home making and home living. Home making quarters in a separate building or cottage is most desirable, or an apartment in the main school building. The formal type laboratories formerly recommended which we copied from the science laboratories are not satisfactory for home making training. Of 152 departments in white schools in the State, eighteen of which are vocational schools, six are housed in a separate house or cottage furnished as a home, two of these are vocational schools. Fifty are housed in an apartment or a group of rooms nearly approaching an apartment, in the main school building, eight of which are vocational schools. Forty-four are housed in two or more rooms not connected and often on separate floors, three of which are vocational schools. Fifty-two are each housed in a single room or part of a room, and five of these are vocational schools.

Development During This Biennium**Day Schools—**

Thirty additional home economics departments have been established, making a total of 158. There is an increase of thirty-eight home economics teachers and a proportionate increase in enrollment. Eight additional vocational schools have been established.

Part-Time Schools—

Part time programs have been established in two centers in the State to meet the demand for such classes.

Evening Schools—

There has been an increasing number of requests for these classes, and from more centers.

In 1928-29 classes were held in ninety-seven centers with an aggregate enrollment of 4,379 women and 115 men. These classes were organized by an itinerant evening school teacher, Mrs. Edith M. Holmes, under the supervision of the State Department for Vocational Education. Mrs. Holmes was assisted in teaching by three trained leaders.

In 1929-30, the adult educational program was directly organized and supervised by the State Supervisor of Home Economics Education, using home economics trained local leaders as teachers. Classes were held in six centers with an enrollment of 293 women.

Evident trends in home economics education in the State—

Its acceptance as a part of a girl's general education for better living and home making.

A greater response from the teachers for professional improvement.

The length of instruction period has been changed from ninety minutes to sixty minutes, thus placing home economics on the same administrative basis as that of the academic subjects.

State Supervision—

The day, part time, and evening school programs are supervised by the State Supervisor of Home Economics Education with the cooperation of the County Superintendents, Principals, Local Directors of Vocational Education, and Local Supervisors of Home Economics.

From January, 1929, to June, 1929, 163 schools having home economics departments, 209 home economics teach-

ers, 152 principals and 33 county superintendents were visited by the State Supervisor.

From September, 1929, to June, 1930, 145 schools having home economics, 177 teachers, 136 principals and 46 county superintendents were visited. The vocational schools were visited on an average of three times during the school year.

The Florida State College for Women is the approved teacher training school for vocational home economics teachers.

During the Senior year, forty lessons in practice teaching in home economics is done under supervision of the Teacher Trainer, in the Leon High School and the Florida High School (College Demonstration School).

Practice in Home Management is done in resident work in the Home Management House for six weeks under supervision of a member of the staff from the School of Home Economics of the Florida State College for Women.

HOME ECONOMICS EDUCATION FOR NEGROES

At the close of this biennium there are twenty-two home economics departments and twenty-eight teachers, an increase of five departments and seven teachers over 1928-29. Two of these schools have vocational departments which receive State and Federal aid.

The State Supervisor of Home Economics Education visits the departments in the negro schools to assist in improving the program, and the teaching.

The Florida Agricultural and Mechanical College is approved for teacher training for vocational home economics.

Twenty hours in practice teaching in home economics under the supervision of the teacher trainer, is done at the Florida A. & M. High School at the college. Resident home management practice is done in an apartment in the School of Home Economics.

CHAPTER X.

Vocational Rehabilitation

How to find one's place in the world, to know what one can do, to know what there is to do and to know how and where to secure the necessary training for the job after it has been decided upon—these problems press upon the mind to perplex all of us who wish to follow life with any plan. As society becomes more complex such problems become harder to meet. They fall with great weight especially upon those who are crippled by accident, deformity or disease, those who are blind or deaf. Such persons often drift into habits of idleness, of dependency and pauperism, or even of crime and thereby become heavy charges upon their relatives, their friends and the commonwealth. At best, most of them eke out a very meager existence with little chance to develop and enjoy the comforts of life. Simple economy would dictate that the State do what it could to prevent such habits and to avoid the cost of crime and pauperism; a sense of fair play would guarantee to such unfortunate people a chance to develop into self-supporting, respectable wage earners. For nearly three years Florida has been dealing with this problem in a constructive way through its rehabilitation division of the department of education. The aim of this service is to render handicapped persons self-supporting by fitting them for jobs which they can perform successfully. This is accomplished through advising and counseling with the handicapped person regarding suitable employment, training for employment, aid in securing a job, and services incidental to these ends.

The following is a brief summary of the rehabilitation work for the two fiscal years ending June 30, 1930.

At the end of June 30, 1929, a total of 308 cases had been placed upon the roll of active cases. Of this number 165 had been determined as eligible. Ninety persons were receiving definite training for jobs which the rehabilitation department had helped them select. Thirty-six cases were receiving services other than training. Seventeen cases had been completely rehabilitated and were filling their jobs satisfactorily in the following vocations: barbering, beauty culture, dressmaking, linotype operating,

poultry husbandry, printing and press work, secretarial work, shoe repairing, teaching, truck driving and mechanics, and watch repairing.

At the end of June 30, 1930, the live roll numbered 351. Of this number 97 persons were in training for the following jobs: Armature winding, automotive electricity, aviation mechanics, architecture, architectural drafting, accounting, bee culture, bulb culture, commercial courses, secretarial courses, bookkeeping courses, filing and typing, electrician, electrical engineering, dietetics, home economics, citrus culture, interior decoration, vegetable gardening, lens grinding, lip reading instruction, landscape gardening, ministry, linotype operation, photo-retouching, photography, radio, showcard writing, story writing, shoe repairing, window display advertising, chiropractic, teaching, basketry, poultry husbandry and watch repairing. Fifty-two persons were receiving services other than training but incidental to their rehabilitation. Twenty-two persons had been rehabilitated successfully in the following vocations: Clerking, bookkeeping, stenography, linotype operating, armature winding, bookkeeping and service station management, photography, watch repairing, secretarial work, auto-electricity, teaching, radio servicing, kindergarten teaching and beauty culture.

The average weekly wage of the 39 cases rehabilitated during these two years prior to rehabilitation was \$2.46. But as a matter of fact only eight of them were employed at the time rehabilitation began. The average wage per week after rehabilitation was \$17.24. The average cost of each of these cases was, exclusive of administrative expenses, \$105.41.

The total amount of funds available for rehabilitation purposes for the year ending June 30, 1929, was \$18,199.00. Of this amount \$9,199.00 was allotted to the State by the federal government and \$9,000.00 provided from State funds.

The total amount of money spent during the year ending June 30, 1929, was \$13,346.51 divided among the following items:

1. Administrative	\$ 6,935.86
(a) Salaries of supervisors, directors, etc \$3,600.00	
(b) Salaries of other employees (clerks, stenographers, etc.)	1,144.25
(c) Travel	1,921.30

(d) Communication	8.31	
(e) Printing	250.15	
(f) Supplies	11.85	
2. For Tuition		4,195.06
(a) Educational institutions (other than Correspondence schools)	3,173.63	
(b) Industrial and commercial establish- ments	794.42	
(c) Tutors	67.00	
(d) Correspondence schools	160.01	
3. For Instructional Supplies		1,047.01
4. Other expenditures covered by the Na- tional Vocational Rehabilitation Act:		
(a) Artificial Appliances		67.00
(b) Transportation		690.68
(c) Medical Examinations		42.00
5. Expenditures not covered by the National Vocational Rehabilitation Act:		
(a) Office Rent and Equipment		45.50
(b) Maintenance of Trainee (Funds donated)		42.00
(c) Artificial Appliances (Funds donated)		281.40
		<hr/> \$13,346.51

During the year ending June 30, 1930, the amount of funds available was the same as for the preceding year. Total funds expended during this year amounted to \$14,543.84 divided among the following items:

1. Administrative		\$ 6,069.91
(a) Salaries of supervisors, directors, etc. \$3,187.50		
(b) Salaries of other employees (clerks, stenographers, etc.)	877.50	
(c) Travel	1,879.05	
(d) Communication	14.96	
(e) Printing	31.67	
(f) Supplies	79.23	
2. For Tuition		6,293.49
(a) Education institutions (other than correspondence schools)	4,530.16	
(b) Industrial and commercial establish- ments	1,101.33	
(c) Tutors	335.00	
(d) Correspondence schools	327.00	
3. For Instructional Supplies		1,288.58
4. Other Expenditures Covered by the Na- tional Vocational Rehabilitation Act:		
(a) Artificial Appliances		10.50
(b) Transportation		739.74
(c)		14.80
5. Expenditures not covered by the National Vocational Rehabilitation Act:		
(a) Equipment		1.82
(b) Artificial Appliances		125.00
		<hr/> \$14,543.84

The department has labored under three conditions which tended to retard its progress, namely: Insufficient personnel to make necessary contacts; lack of funds for maintenance of needy cases who could not supply living expenses away from home, and conditions of unemployment which made it difficult to secure jobs for trained persons. However, the splendid cooperation of social, educational, and civic agencies, as well as employers, and interested individuals has mitigated these conditions to some extent. At the present time available funds are not sufficient to justify an additional field worker, but if state finances are in condition to permit the matching of the next federal allotment, which will be materially increased, the rehabilitation funds will be ample to provide such a worker.

During this year the Crippled Children's Commission was appointed and began functioning. The rehabilitation department will benefit materially from the services of this commission. The Commission for the Blind, which was authorized by the legislature, has not yet been appointed due to lack of funds.

The Florida Rehabilitation Service would be greatly aided by the passage of an adequate Workmen's Compensation Law. There is an increasing interest in this subject and socially-minded citizens of our State are engaged in a campaign to secure the needed legislation.

There is much evidence that the people of Florida, who are acquainted with the aims and methods of rehabilitation, regard it very highly.

The following paragraphs describe briefly some of the cases who have been rehabilitated:

J. W. B., a young man in his early twenties, suffered from an attack of arthritis, which rendered him unable to support himself, put him in a wheel chair, and finally into a county home for the poor. He was trained by the rehabilitation department in watch and clock repairing at a cost of \$240.84, was aided by his county, friends, and the department to set up a repair shop, left the county home and is now earning over \$50.00 per month. At the present time he is training another cripple in his chosen vocation.

L. C. W. was born without a left hand. At the age of nineteen he entered a business college at the expense of the rehabilitation department, took a commercial course,

secured a job as night clerk in a large garage and was rehabilitated at a salary of \$75.00 per month—all in less than a year.

G. F., aged 29, had been employed as handy man around sawmills, machine shops, and at odd jobs at wages ranging up to \$3.50 per day. He was given a correspondence course in radio. Before completing the course he secured a job at a salary of \$26.00 per week and commission. He has been on this job several months, during which time he has been a very successful employee and students.

E. G., aged 19, had infantile paralysis which left one of her limbs almost completely paralyzed. After finishing high school, she was given a secretarial course, which enabled her to secure a position in a large apartment house, where she earns a salary of \$18.00 per week.

E. H., crippled by a bone infection, after having been given a stenographic course and placed in a satisfactory position, wrote: "From the depths of my heart I say again—you have made me happy."

It must be borne in mind that rehabilitation service is case work and each case must be handled as a separate problem and requires much time. Handicapped persons can not be dealt with in groups. It often takes many years to carry through a program to successful conclusion. For these reasons results can not be compared with other educational services from a numerical standpoint.

If rehabilitation service is to be extended to all those who are applying for it the personnel of the department will have to be enlarged. One supervisor can not contact and supervise all cases. Also funds will have to be greatly increased. There are in the files of the rehabilitation office now approximately 2,500 names of handicapped persons. This is only a fraction of all those who might be found in Florida.

CHAPTER XI.

This chapter gives school statistics for the two fiscal years for which the report is made. The tables for the first year are very similar in character to those given in former years. Any items for the fiscal year ending June 30th, 1929, may readily be compared with similar items in any former years.

The tables for the second year—the year ending June 30th, 1930—are very different in character from those of the first year. They give statistics for Elementary, Junior High and Senior High Schools separately. This information had been requested from us for the past several years both by the U. S. Department of Education and by the public generally. Information of this kind has been given for several years by many other states and we feel sure that it will be appreciated by readers of our report.

These special statistics for the different departments apply to schools, teachers, pupils, attendance, the disbursement of funds, etc.

The disbursement of school funds under this system is much better classified than it has been in former years. See especially the various parts of Table XVII; also Tables XXII to XXIV inclusive for more detailed information.

The amount of State school funds distributed to the counties within the past two years will be of interest to all of our readers. This information for the first year will be found in Table XV, pages 259-260. The amounts distributed for the second year may be seen in Table XV, pages 317-318.

The total amount sent to the counties for the year ending June 30th, 1929, was \$2,526,477.61. The amount distributed in the year ending June 30th, 1930, was \$4,645,535.78. It will be seen that the amount received by the counties for the second fiscal year was much larger than the amount received the first year. This was due largely to two causes. In the first year the distribution represented a collection by the Comptroller of twelve months, while the second year represented a collection of fourteen months. This was due to the fact that at the beginning of the year the funds were distributed quarterly while at the close of the year they were distributed monthly. Furthermore the gasoline fund, provided by the Legislature of 1929, was much larger than that provided by the Legislature of 1927.

STATISTICAL TABLES FOR SCHOOL YEAR 1928-1929

TABLE I.—(a) Number of Schools Taught; (b) Aggregate Days' Attendance of Pupils; (c) Average Length of School Term in Days.

EXPENDITURES

Cost of Books sent to Counties at Contract Prices less Ten Percent	\$97,438.89
Printing and Incidental Expenses	528.50
Total	\$97,967.39

SUMMARY OF STATISTICAL TABLES, 1929-1930

Cash on hand at beginning of year.....\$ 4,846,474.66

RECEIPTS:

1. Revenue Receipts\$20,988,823.38

2. Non-Revenue Receipts. 3,587,973.98

Total Receipts 24,576,797.36

Total Amount Available for

Use During Year \$29,423,272.02

DISBURSEMENTS:

1. Current Expenses:

(a) General Control ..\$ 660,642.56

(b) Instruction 10,069,190.25

(c) Operation 905,893.97

(d) Maintenance 424,547.00

(e) Auxiliary Agencies 1,116,282.92

(f) Fixed Charges ... 242,794.06

Total Current Expenses\$13,419,350.76

2. Capital Outlays 1,485,379.24

3. Debt Service 10,098,503.86

Cash on Hand at Close of Year..... 4,420,038.16

Total Amount Available for Use During

Year \$29,423,272.02

ATTENDANCE:

1. Enrollment of White Schools 254,575

2. Enrollment of Negro Schools..... 91,859

Total Enrollment 346,434

1. Average Attendance, White 195,839

2. Average Attendance, Negro 71,203

Total Average Attendance 267,042

PER CAPITA COST OF CURRENT EXPENSES:

1. Cost Per Pupil Enrolled\$ 38.73

2. Cost Per Pupil in Average Attendance..... 50.25

TEACHERS EMPLOYED:

1. White 8,654

2. Negro 2,306

Total 10,960
